Hello,
I'm looking for the PSU of an SLM 605.
Or if some-one can repair my PSU (2x), and living not so far from
Belgium or Mecklenburg-Vorpommern, I'll be very grateful.

Mark

Hi to everyone in this NG...

I rescued an Atari 1024STf, with and odd memory expansion to 2.5/2 MB (it
depends on the weather,but this is another question ... ;

Well, Cubase 2.0, after loading, at first mouse movemente crashes with internal error xxxxx

I used to run it flawlessly on a 512 Gold (1MB).

It depends on the memory expansion ?
It's marked FSE and it's a bit complicated...

The TOS of the STF has problems with the 2.5 RAM. There was a fix you could run from the AUTO Folder.

Supposing it's a matter of RAM, if the previous fix doesn't correct this, there were two little programs to "downgrade" the STF to 1MB or 512KB for backwards compatibility.

That's what I remeber, but I can't tell you where to find them...

Guillaume.

Ehm ... TOS 1.02 ...
Must find the fix... I'm starting from HD, so no problem with the AUTO
folder...

Since there will be no C4 this year, I have looked into doing a convention =
here in Clarksville, TN at the Riverview Inn (http://www.theriverviewinn.co=
m/rvstie/).  It would be the last weekend of May, (25-27) and we'd have the=
 room for 48 hours.  It's a very nice facility in a great location near the=
 Cumberland River and just minutes from shopping, dining and recreation for=
 the family.=20

I'm going to put down a deposit on the room, but I'd like to get an idea of=
 how many people would be interested in coming.  =20

The convention is open to fans of all retro computers and you are encourage=
d to reserve a table if you have something interesting to show and tell.  I=
f there are any volunteers we'll have presenters as well.=20

Please RSVP on Facebook, or send me a private message and I'll add you to t=
he list.=20

I have Videlity installed on my Falcon, and it works well, giving me up to 832 * 624 pixel resolution on my LCD VGA monitor.

Priginally it displayed a Black Scorpion logo during booting, but it no longer does so, just a short stretch of black screen before the desktop comes up. Doesn't worry me particularly, as long as it isn't a forerunner of something else going wrong.

I assume the graphic comes from a ROM in the Videlity adaptor. Do these fade in time? And is there any easy way to revive them?

Regards, /Peter/

My fellow Cheshunt Computer Club member Mark Branson phoned me
about this. He thinks the logo only comes up in the normal Atari
screen resolutions, not any enhanced ones. Can anyone confirm this?

(Mark can't at present post here - he receives emails and can
access usenet, but for some reason neither of his ISPs allows him
to post at present. I've suggested he contacts them to see whether

he has been blacklisted for some reason - like someone hijavcking
his account address for spamming etc.)

Regards, /Peter/

Hi,

Here is statistics about ARAnyM 0.9.11 downloads, released 2011/02/06

Package	#	Architecture
aranym-0.9.11.linux.x86_64.rpm	43	AMD64
aranym-0.9.11.linux.ix86.rpm	48	ix86
aranym_0.9.11.linux.i386.deb	29	i386
aranym-0.9.11-macosx.dmg	95	Mac Universal (PPC/x86)
aranym-0.9.11.tar.gz	242	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.11/>

i.e. GNU / Linux (120), Macintosh (95) =3D total 457.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Come one, come all, to the Seattle Retro-Computing Society's monthly meeting, on Saturday, September 17th, 2011!

Do you do any of the following with old computers near Seattle?

+ Use, collect, and/or restore them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading this
near Seattle, then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meetings are graciously hosted by the Living Computer Museum, a relatively new organization which is building a computer museum in Seattle's SODO neighborhood. There will be refreshments, a Buy-Sell-Free-Trade table, and enough table space & power to set up anything you
may want to show off!

For further details, please see our newly improved web page at http://www.seattleretrocomputing.com/ and our mailing list at http://groups.google.com/group/seattle-retrocomp . Hope to see you there!

(Please note, we usually meet on the fourth Saturday of each month; we had to move it up a week this month because of schedule conflicts with retrocomputing events in other cities.)

Gordon "gsteemso" Steemson
SRCS agitator-in-chief

Maybe someone from Atariland knows or knows where the information is, since we could read IBM/PC floppies...

When the 3.5 floppy first appeared, in the PC world, if you had the right drive and the computer's BIOS supported it, you could format a floppy to 3 densities, 720k, 1.2mb, and 1.44mb.

You also had disks formatted by Windows95 and after, plus some disks that were IBM formatted.

I'm trying to find out the difference between the Windows format and the IBM format.

Why? I need to upgrade the BIOS on an old Gateway computer, and the instructions specify the floppy used *must* be an IBM formatted floppy. If you use a Windows formatted floppy, the update will fail.

Anyone know/remember the difference?

So far, asking the right questions in the right places in the PC world, and Googling and Ask.com, have not come up with the answer. :-(

The only thing I can think of is long file name support. Windows floppies
can have long file names as well as short ones ....

Apart from long file names the only other thing I can think of is that a
Windows/2000, XP or later disk isn't normally bootable, but it there is an
option to create a DOS boot disk in Explorer.

I think that's because the question doesn't make sense. Almost all "PC" and
"ST" floppies are formatted FAT 16

And both long and short names are still there.

True, but in the early versions of TOS, a floppy created by TOS cannot
be read by a PC until you manually change 2 bytes in the boot sector.
TOS wrote zeros, DOS and Windows put something else there. There were
more than one little utility that would make that change for you, and at
some point TOS was changed to write the correct values into those two bytes.

My unconfirmed thought is there is something similar to an IBM formatted
diskette.

Hi,

The following WEB sites are missing

<http://www.worldofatari.com/>
<http://www.myatari.net/> MyAtari Magazine
<http://www.ataricentral.com/> Ataricentral.com homepage
<http://lst.laserforce.org/> Le site web de LST of Laserforce

May we have news from their maintainers ?

Best regards,

Can't you just format a floppy in the gateway,
format a: /s
from memory that creates a bootable floppy.

I could, but that wouldn't answer my question.  :-)

I'd like to definitively find out the *exact* format of an IBM formatted
floppy, so I can be sure I've followed the BIOS instructions to the letter.

Hi Ken,

You can try this page for reference:

http://support.microsoft.com/kb/75131

Given that the "IBM" format is actually an MS-DOS format, I think
you're safe here. As you may know, early versions of TOS could read IBM
discs but not format them due to a difference in the number of FAT
entries. I seem to recall the ST wrote 5 and MS-DOS used 2...

Hope this helps...

Hi, Ari,

Thank for that link, I've bookmarked it. :-)

Have you seen it, in writing as part of an official type document, that
the IBM format is simply an MS_DOS format disk?

I'm not saying it isn't, but with this very obviously obscure issue with
this computer, I'm leaving nothing, absolutely nothing, to chance.

I was thinking the ST wrote a 0, but I don't really know. I know I
always used a little utility to change the byte, and I'm thinking the
utility came from Little Green Footballs.

Sure wish getting my TT and Hades back up and running would migrate
faster to the top of the to do list!   LOL

```

i know a little on the subject
its something like tracks multipled by sectors =bytes +bootsector or something
i followed a basic listing along time agoi to write my own formatting program

it also requires a filler byte to write to all the newily format sectors.

it was in gfa basic and simply called format .lst if i remmeber correctily

charles

Hi Ken,

It's pretty well known in the old-school PC community that IBM disc format is the MS-DOS disc format as Microsoft licensed MS-DOS to IBM.

My first computer was a PCjr, which ran PC-DOS 2.1, which was nothing more than a re-branded version of MS-DOS. They differed only in some driver files, a handful of utilities and the version of BASIC bundled on them. IBM PCs could boot MS-DOS, etc.

All versions of the ST could read IBM / MS-DOS formatted discs assuming compatible hardware - e.g. a 720KB drive. The reverse was not true until TOS 1.4 due to the previously mentioned FAT differences. I remember buying packs of 3.5" floppies at school at were already formatted for IBMs and they worked fine.

Various utlities existed for the ST such as DC-Formatter and countless others that allowed STs running older versions of TOS to format compatible IBM / MS-DOS floppies.

What you couldn't do on an ST was format a bootable IBM floppy (FORMAT /S) since the boot loader was tied to the computer's OS and host architecture. Otherwise, they were fully interchangable.

Ari

Content-Type: TEXT/PLAIN; format=flowed; charset=US-ASCII

I'm Looking for an Atari Mega ST4. Please, no upgraded Mega 2's. I need a stock
4 MB Machine Plus a TOS 1.4 upgrade would be nice. Preferably the 6 Chip TOS
set as laid out on the MotherBoard. The case needs to be unaltered, not cut up
to replace a drive with an incompatible eject button. Please direct All replies
via E-Mail to Atari@aracnet.com or call Ben anytime (503)256-9974.

I need to keep this Within the U.S. as far as this Mega ST goes.

Why insist on a Mega ST4? Why not a Mega ST2 upgraded to 4 Megs?. Answer: I had
a Mega 2 upgraded to 4 Megs. The upgrade failed & I don't want that again. I
don't care if Jack Tramiel himself upgraded it and Guaranteed it. I want the
Mega to come that way from the factory. I don't trust most other peoples tech
work. I'd rather have the RAM put in at the Factory.

Games/Software, Hardware/Accessories & Books/References!Atari Computers,8 Bit
& ST Lines + Atari 2600/5200/7800, Jaguar & Lynx Games, Consoles & Hand Held!

>What you couldn't do on an ST was format a bootable IBM floppy (FORMAT
>/S) since the boot loader was tied to the computer's OS and host
>architecture. Otherwise, they were fully interchangable.

There is also an Atari program DISKMOD.TOS used with a 512-byte
file BLOCK0.DAT which writes a PC-type boot sector to any
80-track 9-sector disk without affecting any other data that may
be on the disk. The first few bytes are '�4�IBM 3.2' and near the
end there is the string 'IBMBIO COMIBMDOS COM', both of which
indicate that this is the IBM format.

As far as DOS is concerned, it's the first 3 bytes that matter.
i.e. 'EB 34 90' in hex.

The bootable floppies on both Ataris and PCs had the same start
bytes, followed by identifiers giving number of sides, tracks and
sectors, but then a small executable program in the rest of the

sector.

Regards, /Peter/

Peter,

I never knew about that utility. Thanks for the tip.

Ari

I remember there were some buys trying to adapt Amiga 1200
accelerators to Falcon, but it turned not that easy at all. Hardware
is to different.

LS

There is a new version available on my home page (see sig).

Changes:
june 24 2011
v4.6
Compiler:
Cast condition code to int on unary plus/minus to
comparisons. (think about it :-)
Also a fix in condition code casting for Coldfire.
Fixed a regression since V3.b4 where differences
between a function prototype and its actual declaration
were not error flagged anymore.

Assembler:
Coldfire instruction set completed. The set is complete,
but check for specific Coldfire restrictions on already existing
instructions is not performed yet. This will be done
in a future release. You can run the new Digger V8 on
object files for checking validity of your Coldfire code.

Library:
Created library ahccstfi.lib.
A standard library for Coldfire but without floating
point. Affects particularly printf and scanf.
For coldfire compatible programs not needing floating
point that one would like to run on a Falcon witout FPU.

Added functions _crystal() and vdi() and struct _VDIParBlk
for programs that submit extra bindings based on the
Pure C GEM library.

Have fun.

There is a new version of Digger (TT-Digger) available on
my home page (see sig).

Changes:

june 2011 v8

Coldfire support.
=================

Name abreviated to "Digger".

Fixed a bug in fmove.l #data, FPcr.
Fixed a bug with int set to size 4.

New menu entry in menu title Goto
'dc.w in text <d>'
Go to the next dc.w in the text segement.
It is about a dc.w due to disassembly failure,
    not the result of a 'data' mark.

These 'dc.w's are displayed in bold red.

There are 2 binaries:

DIGGER.PRG	68000	versie: runs on every Atari or clone.
DIGGERCF.PRG	68020+	versie: runs on Falcon or higher and Firebee.

The soures of Digger are part of the AHCC distribution.

```

Hello Henk,

I tried to download the new version and the 020 compiler version gives
me a 404 error, file not found.

Best regards,
Matthias

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

```

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> It is now updated because
the <HELP> key is now available with <F11> on a Mac. It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

Hi,

The *miniPack* <http://eureka.atari.org/miniPack.zip> was updated
with `aranym-jit` ARAnyM 0.9.11 for x86 GNU / Linux for PC machines.

Enjoy, it's yours =3D)

Greetings,

I'm looking to purchase or trade for the following list of Atari Items,

Screen Eye Digitiser for Atari Falcon 030.
Expose Digitiser with/without splitter for Atari Falcon 030.
Eclispse Graphics Board for Atari Falcon 030.
FPU 33mhz or better.
FAD: Falcon Audio Digital (Fad 2in 2 out),
Fad 2 in/8out, Fad 8 out.

JAM IN   JAM OUT
JAMPRO2in/8out and or JAMPRO8in/8out.

Also, looking for various Falcon upgrades, such as the Nemesis,
BlowUp, AfterBurner and etc.

If you have any hardware/software you no longer need,
send me a list and I maybe able to work something out.

Will pay Cash or have various Atari Items for possible trade.
I will do deals with OverSeas persons of intrest.

phantomm@sudddenlink.net

Barry

Hi,

i try to replace the timer IC, which has a battery inside, that is exhausted.
I could remove the old IC. But i still have to insert the new one.
But in between i wanted to check, if the Falcon is still alive.
But it doesn't show any boot screen.

Can someone confirm, that it just doesn't work without the timer IC?
Or should it do without? (Then i maybe damaged it).

- thanks!

rgds,
Frank

Hello,

you cannot leave the IC out. The chip contains some NVRAM.
That stores more information than just the clock such as harddisk
configuration, boot language etc.

cheers,
Matthias

The clockchip of the Falcon also contains some non-volatile RAM in which the machine stores some boot and configuration parameters. Therefore it probably won't boot without the chip.

I suggest you solder a chipholder into the motherboard, so next time you can replace the chip easily - that's what I did on mine. This also makes it less likely that the chip will be damaged during soldering. If you do this, you have to either discard the shielding under the keyboard, or cut a hole in it for the clock chip, since it will now sit too high for the shielding to fit over it. I used a Dremmel-type sanding disc as a cutter, but it can be done with a Stanley (or similar hobby) knife, though it takes a *lot* of cuts to get through the mumetal. Alternativley, drill holes at the corners of the rectangle to be removed and use a file or sawblade.

Good luck!

Regards,

/Peter/

Hi.

I've been using NoSTalgia as my ST emulator on the Mac for a while now,
but it's PPC-only. With Lion about to turn up, that means it bites the
dust.

Is there a native Intel one anywhere? My hunts have come up short.

Cheers,
Ian

Hatari can be run on OS X and I think there are binary distributions
available. Otherwise you have to compile it yourself.

There was just a new release yesterday.
check http://hatari.berlios.de/

cheers,
Matthias

Excellent - thanks for that. I noticed 1.5.0 didn't have an OS X
binary, so I've compiled it myself. Small hassle with incompatible libz
files (it's looking for /usr/local/lib/libz.dylib, which is 32bit
whereas my system is 64bit), but a bit of editing the CMake output has
fixed that and I now have a 64 bit binary.

I'll play around a bit to make sure all is working as expected, and if
it is I'll contribute the binary back.

Cheers,
Ian

Subject: *****ATARI ST/STE/FALCON030***** WANTED

Greetings,

I'm looking to purchase or trade for the following list of Atari Items,

Screen Eye Digitiser for Atari Falcon 030.
Expose Digitiser with/without splitter for Atari Falcon 030.
Eclispse Graphics Board for Atari Falcon 030.
FPU 33mhz or better.
FAD: Falcon Audio Digital (Fad 2in 2 out),
Fad 2 in/8out, Fad 8 out.

JAM IN JAM OUT
JAMPRO2in/8out and or JAMPRO8in/8out.

Also, looking for various Falcon upgrades, such as the Nemesis,
BlowUp, AfterBurner and etc.

If you have any hardware/software you no longer need,
send me a list and I maybe able to work something out.

Will pay Cash or have various Atari Items for possible trade.
I will do deals with OverSeas persons of intrest.

phantomm@sudddenlink.net

Barry

```

Hello All,

Since over a month I am happy owner of Hades, and I'm looking for people who can help me in configuring the equipment. I have several questions:
1. Which video card is better I have to choose PCI Mach 64 or ATI Rage Pro? And How can I check how much memory has on this card.

2 I do not know why but in hades that was used to working with Calamus, trying to run Papyrus 8 error appears four lines of numbers or something like this and returns to the system.

3 In the second hades where the Rage Pro card is no such problem, but unfortunately the physical replacement of these cards and copying partitions from one disk to the other is not helped. Averaged screen as if something was wrong as frequently.

Best Regards
Piotr

There are several Hades users over at the www.Atari-forum.com.
More likely ppl will see your posting over there.

Hi again,

I adapted:
- MP_STE the video player
- ColorTOS (Ronald Andersson and me) to get color icons and 3D effects on the desktop.

Everything here:
http://gtello.pagesperso-orange.fr/mste_e.htm#soft

Guillaume.

Ho yes, thanks ! There's also

<http://www.sillyventure.pl/> SillyVenture 2k10

that is now back online, and really an impressive WEB site :-)
I guess that it is because SV2k10 is finished, and SV2k11 is coming.

I'm happy for that.

Best regards,

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

```
<CENTER>
<table border=3D"0" cellpadding=3D"2" cellspacing=3D"2">
   <tbody>
     <tr>
       <td><br>
       </td>

Hi all,

I added the support for the FPU when present in a Mega STE in my FORTH language.

Speed increase is fabulous! I have to say that the original maths routines were written by my some years ago, so I did my best at this time.

Here are the results, FORTH STE section:
http://gtello.pagesperso-orange.fr/mste_e.htm#soft

Guillaume.

I think you have to specify, either for the TT or the Falcon, another

ID than 7.
By default, the computer is the 7th element in the chain.
So, one of your computers must be ID6 for example, the other ID7 and ID0 through ID5 for the peripherials.

But I'm not a specialist!!!

Guillaume.

This should work as long as you ensure that all of your device drivers support bus arbitration (initiator identification is not sufficient, you definitely need bus arbitration) and that both computers have different SCSI IDs.
You also have to ensure proper termination, which might not be so easy if the Falcon or TT are switched off.

Please help spread the word! The 3rd annual "Atari Party" in Davis, California has been scheduled for Saturday, June 11th, 2011, from 12pm-5pm.

  http://www.newbreedsoftware.com/atariparty/2011/

Join other Atarians and the curious/nostalgic public for a day of video games on a variety of Atari systems: Pong, 2600, 5200, 7800, 400/800/XL/XE, ST/TT, Lynx and Jaguar, plus emulated arcade games on GameBoy Advance & PlayStation2.

We'll also be screening the documentary file "Once Upon Atari" during the event, and the 1984 spy-thriller-with-Atari-game "Cloak & Dagger" at the end of the event.

Finally, there'll be a free prize give-away where you could win anything from Atari-themed t-shirts and playing cards to actual Atari systems!

This event is completely free, and open to the public. (This includesd the movies and prize give-away! Yes: just show up, and you may walk away with an Atari 1200XL or Flashback 2+!)

Davis is located just west of Sacramento, along Interstate 80; about 1hr east of San Francisco.

Did you have HSMODA07 installed?
This allows 115Kbps easily.
I have this between my Falc & PC.
So your TT/MSTE should be no issue as they are 16MHz or faster.
Some details here -> http://phsw.110mb.com/nw-nullmodem.html

Okay!
I will try HSModem,

Guillaume;

You can find it at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

> I cannot find it in Sourceforge dl.

That's because the latest ARAnyM 0.9.11 wasn't yet built for Gygwin.

If someone can build it and send the binaries to the ARAnyM's team,
this would be great, and helpful for the users.

Regards,

Oh, so it is not build yet?
Unfortunately I do not have the tools on Windows to build it.

Ho yes. I can read in the Changelog, for ARAnyM 0.9.11 :

2010/07/17 - Patrice, contributed by Jean Conter
- Preliminary SCC emulation for serial port.

>> That's because the latest ARAnyM 0.9.11 wasn't yet built for Gygwin.

That's obvious.

> Unfortunately I do not have the tools on Windows to build it.

It's free software, but I don't have Windows installed. It's up to you.

ATARIstically your's =3D)

Hi all,

a new release of the hard disk tool DISKUS is available on

http://www.seimet.de/atari/en/index.html

In DISKUS 3.94 a minor bug related to displaying partition information of DOS compatible media has been fixed.

(Note that DISKUS and its manual are only available in German.)

Best regards

Uwe

I was recently given an Atari 520ST system, which I looked over and decided I don't really have any use for. (I'm more of an 8-bit guy :))

I went through all of the floppies I received, and took out the ones that had personal information (resumes, essays, etc.) as best I could, and gathered the following inventory:

Hardware:

Atari 520ST (w/ power adapter)
STM1 mouse
SF314 3.5" floppy drive (w/ power adapter w/ repaired cable, data cable)
SM124 monochrome monitor (w/ power cable, attached video cable)
Okidate Microline printer (w/ data cable)

Software: (on 3.5" floppies)

TOS system disk (CA026061-001, (c) 1985)
Language disk (CA026062-001, (c) 1985) (x2)
DEGAS (BI 3-0512, (c) 1985)
ST Writer 1.07 (backup disk?)
ST BASIC (copied from backup disk)
Micro C-Shell
ST-Talk
"Various demos"
"Desk Accessories"
Back-up disks of misc above.
Disks that didn't work, so I formatted (x6)

Manuals and Books:

```
------------------
Atari 520ST Computer Owner's Manual
The Atari ST Companion
SF BASIC Sourcebook and Tutorial
DEGAS manual
Okidata Personal Printer User's Manual: Microline 92 and 93 Printers
COMPUTE!'s ST Programmer's Guide
Presenting the Atari SF: An in-depth look at the sensational new computer that
promises to bring you "Power without the Price"
Atari SM124 High-Resolution Monochrome Monitor Owner's Manual
Atari SF314 Microfloppy Disk Drive Double-Sided, Double-Density Owner's Manual
ST-Talk 1.0 manual
Atari ST Logo Addendum
Micro C-Shell Programmer's Manual
Micro C-Shell Tutorial
A Sourcebook for Atari Logo
Printed:
* ST-Talk User's Guide
* ST-Writer Manual: Tutorial
* ST-Writer Manual: Reference Guide
* ST-Writer Quick Reference

Accessories:
------------
Disk Bank floppy disk holder
Small disk holder
Various individual clear disk sleeves
Various unused disk label stickers
Small wooden stand
Small stack of tractor-fed US Letter (8.5"x11") paper

It's free to you if you come pick it up in Davis (near Sacramento).
I'm happy to hold onto it until the "Atari Party" event that I have
scheduled for June 11th here in Davis.
( http://www.newbreedsoftware.com/atariparty/2011/ )

Alternatively, I'm probably going to California Extreme in Santa Clara in
July, and could probably be convinced to bring it with me for a drop-off.
( http://caextreme.org/ )

Email me privately if you're interested!  nbs@sonic.net

Hi Atarians,

This should not be a usual commercial. I want you to know that we (Frederick Mei=DFner, the hoster of the Profibuch and myself) have set up a Jabber server for the Atari scene.

To be understood, right now, there is no native jabber client for Atari!

For those running MiNT, MCabber (http://mcabber.com/, the successor of well known cabber) might be pretty straightforward. Its a console client using ncurses, like rhapsody IRC or pico editor. Another workaround to connect to Jabber with your Atari, called BitlBee (http://www.bitlbee.org). This is a software that acts as gateway between IRC and Jabber (and other IM protocols). You connect via aIRC to it, and have a room with your online buddys in.

We also have talked to Joakim to implement the XMPP protokol to aICQ. Another port could be Psi as a desktop client (http://psi-im.org).

Understatement, it will be a big task)

If you want a Jabber Domain with "Atari" in it, join us at
http://www.atari-jabber.org

bye
Bernd

Just wondering how many Atari Falcon users in the U.S.A. plan on
buying the SuperVidel.
I was planning to until I went to xe.com and found out that 300 euro
(apprx price) comes out to nearly $450.00.
That's a bit rich for me. Can't even consider the Firebee, close to a
grand USD.

I've have upgraded my Falcon with the CT60 and the Ethernat, that's
about as much as I can afford....considering the U.S. economy these
days.

Thanks

I hear ya. I actually went so far as to sign up for the SuperVidel, then changed my mind after converting that price, and took my name back off the list.

With a mortgage, family of five, and my wife currently unemployed, its hard for me to justify that. :(

IF I did or do have the money anytime soon, its hard not to think how much more I'd be getting by going ahead, investing a bit more, and get the FireBee instead...

Hi!

on  http://www.seimet.de/atari/en/index.html updated versions of
SCSI_MON and XHDI_MON are available. The output can now be redirected to
the screen. Please refer to the README for details.

Best regards

Uwe

Hi,

Here is statistics about ARAnyM 0.9.11 downloads, released 2011/02/06

Package                                   #               Architecture

aranym-0.9.11.linux.x86_64.rpm           14                      AMD64
aranym-0.9.11.linux.ix86.rpm             16                       ix86
aranym_0.9.11.linux.i386.deb             21                       i386
aranym-0.9.11-macosx.dmg                 40     Mac Universal (PPC/x86)
aranym-0.9.11.tar.gz                    142        Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.11/>

i.e. GNU / Linux (51), Macintosh (40) =3D total 233.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

I, and others, are still waiting for the release of this Atari clone. I like using the Falcon, but it is nothing like what I will get when the Firebee comes outs. And of course it does not compare to what I had when my Hades060 was running. Still, it is better than nothing. If any of you have not checked out the Coldfire Project website, I would do so. Lots of nice things happening there. Try Youtube also.

That does sound interesting and I also have the CT60 upgrade. I just have not installed it yet. I was thinking of going with the PCI upgrae, but I just may install it into my Falcon. I may get the SuperVidel. I will just have to wait to see what happens with the FireBee I have ordered.

hi,,
Why upgrading the source in LISP, at the source C++LISP is more better
than only the source LISP ?

Because 1. the source C++LISP is hybrid language with LISP and C++

Because 2. suport the program bigger size

Because 3. the users can write directly the equations..math

Because4. Convert easy from C++LISP at Visual C++ObjectARX

Downloading the lisp-linker:
    http://www.puiubrat.3x.ro/netilisp.exe
Regards..

SYS_MON also logs XHDI calls. And in combination with TEMPLMON you can
set breakpoints which are executed when a system call is executed.

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	96	AMD64
aranym-0.9.10.linux.ix86.rpm	80	ix86
aranym_0.9.10.linux.amd64.deb	51	AMD64
aranym_0.9.10.linux.i386.deb	222	i386
aranym-0.9.10-cygwin.zip	1534	i386
aranym-0.9.10-macosx.dmg	752	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	342	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (449), Windows (1534), Macintosh (752) =3D total 3077.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

> Manitor won't log AES, VDI or line-a

Manitor log:
- AES
- VDI
- Gemdos
- Xbios
- Bios
- 2 Bomben Exception (Bus Error)
- 3 Bomben Exception (Address Error)
- 4 Bomben Exception (Illegal Opcode)
- 5 Bomben Exception (Division by Zero)

and GEM messages from appl_write (evnt_mesag/evnt_multi).

Gerhard

Xref: g2news1.google.com comp.sys.atari.st:2619

Hi,

I started writing a little monitor for TOS without the need of a script interpretor or multitasking.

I named it SYSREC (system record), and here are the features:
- it runs a program with its command line

- records every system call Gemdos/Bios/Xbios/VDI/AES/LineA (you can select what you want in this list)
- don't record other programs'calls 'in particular, doesn't record the VDI calls from the AES)
- recording can start immediately or after a Alt+Help key press
- a second Alt+Help stops recording and so on.. (record, stop)
- at the end you get two files:
    * the first with the mem copy of the recorded codes
    * the second, a text file with functions names

I'm working on it, adding the use of a SYSREC.INF file containing the settings, so you d'ont have to retype everything.

I'll put this on my page when it will be useable.

Another idea would be to keep track of the calling addresses displayed as an offset from the TEXT start. This would ease patching programs when they need some new features.

Guillaume.

As an example, here is the ouput for TSTSCR_E.PRG that tests the screen encoding:

```
GEMDOS(074/$04A) :  Mshrink
  AES  (010/$00A) :  appl_init
  AES  (077/$04D) :  graf_handle
XBIOS (004/$004) :  Getrez
  VDI  (100/$064) :  v_opnvwk
  VDI  (102/$066) :  vq_extnd
  VDI  (123/$07B) :  v_hide_c
  AES  (100/$064) :  wind_create
  AES  (051/$033) :  form_dial
  AES  (101/$065) :  wind_open
  VDI  (014/$00E) :  vs_color
  VDI  (014/$00E) :  vs_color
  VDI  (014/$00E) :  vs_color
  VDI  (014/$00E) :  vs_color
  VDI  (020/$014) :  vsm_color
  VDI  (007/$007) :  v_pmarker
  VDI  (020/$014) :  vsm_color
  VDI  (007/$007) :  v_pmarker
  VDI  (020/$014) :  vsm_color
  VDI  (007/$007) :  v_pmarker
  VDI  (020/$014) :  vsm_color
  VDI  (007/$007) :  v_pmarker
  VDI  (109/$06D) :  vro_cpyfm
  AES  (102/$066) :  wind_close
  AES  (103/$067) :  wind_delete
  AES  (051/$033) :  form_dial
  VDI  (122/$07A) :  v_show_c
  AES  (052/$034) :  form_alert
```

```
GEMDOS(060/$03C) :  Fcreate
GEMDOS(064/$040) :  Fwrite
GEMDOS(062/$03E) :  Fclose
  VDI  (101/$065) :  v_clsvwk
  AES  (019/$013) :  appl_exit
GEMDOS(000/$000) :  Pterm0
```

I will need some help for that:
What happens in this conditions?
SYS REC runs the program to monitor through PEXEC.
And, every trap from the program is redirected to SYSREC before it is executed.
Will this hang the system ??

Have I some flags to set? Some functions to call to share my code with the child program?

Guillaume.

Hi!

I review .st floppy images using hex editor and in some I have found the following text (almost at the beginning of the .st file):

"very compact code by DYNACORE//TSCC"

I wonder if somebody know what program leaves such a message. Is it a copier, av?

Thanks

No, it's probably a simple
dc.b "....",0 statement, included in the bootsector code. Maybe some
demo or loader.

Matthias

From that description, it could definitely work. Make sure to set the
executable flags in the header of the binary to "Super", to ensure
that it runs in the same memory space as the kernel. Unless you're
using something like PEXEC mode 106, I think the child will share
memory with the parent.

Can't be worse than mine :)

Anyway - it's awesome that you release the source code. If there are
any problems with memory protection, it can be fixed.

Any news on this? Maybe they could be persuaded to release the
sources :)

     I don't think so, because a Windows version still exists and they want
to protect the algorithms they created to manage sound files (effect,
etc..).
     That's what they said to me. And I can understand.

     Too bad...

     Guillaume.

     Okay, that looks easy.
     Will you be able to make some testing?
     I didn't finish yest, but it won't take long now.

     Guillaume.

     I stopped expecting to earn a living with Atari software long time
ago..! So why not share the source code?
     The shareware experience with M_Player/MP_STE was a cool moment and it
really helped adapting the software to many configurations and many
video formats.

  If there are
> any problems with memory protection, it can be fixed.

     Great.

     I don't use Mint, but if it could be useful for others with a little
work, this is worth it.
     Guillaume.

I'm assuming that these Atari Girls will be using XLs...  You know, so
that they match the wedding dress, stove, and washing machine.

I don't understand. Most of the XL's that I have seen were black, no?

Yeah, even I'll admit that that one was a stretch. I was going for the white part of the XL matching the usual color of the dress and appliances, but it didn't really work.

So here's something I didn't expect to find on Amazon instead:
http://www.amazon.com/Atari-1010-Program-Recorder/dp/B001VO7WDC .

Cassette lore: I remember one of the criteria for what was a serious or modern computer was: If it ever had a cassette interface it couldn't be modern. By that definition the IBM PC which came stock with a cassette interface was classified as previous generation.

I loved my Atari cassette! My first was one of the GE types but I picked up a bunch of 1010s after that. I was doing a lot of programing for other people which meant me doing M/L programs for them to call from BASIC mostly. I must of stepped on DOS a 1000 times rendering it incapable of saving my work. Heck, couldn't even load a utility to step through memory.

Before I got Omnimon and developed better programming practices, like save before you run or compile, the cassettes saved my bacon dozens of times. I can remember getting in arguments with ROM vs. loadable binary for DOS mainly on my experience with how when everything else went south on an Atari you could always count on the ROM cassette routines to still be there after an errant pointer.

Just my op but every computer should have a routine in ROM that is
bullet proof. Just something that comes in maybe as an interrupt and
watches for a key combination. It would only need to be big enough to
write out a memory snap shot so you could figure out what happened.

Rick

Most of the case was white. Only the keyboard portion was black.

Hi,

the little monitor is on my page, you can try it.
The version runs, no more. No beautiful interface, no error control for now.

It comes with docs in french/english, an example and source code.

In the table "THE PROGRAMS", line "System Recoder":
http://gtello.pagesperso-orange.fr/downld_e.htm

Works with TOS, with Mint, memory protection can be a problem...

Guillaume.

is this for me to understand ?
so you have a mini tron trace that writes to file
the gemdos bios and xbios

what about when users install there own traps for these routines are
they captured too?
raps
i know its not un-common to use some of motorolas other empty traps
for interupt use installing the same routine into new trap address

just a thought

charles

Why not!
This could be another option,

Guillaume.

The XL might not match the color of the wedding dress, but it might
match the size. :P

Hi,

Here is what I saw in the French "Le Monde.fr" news of 2001/01/05

Back to the future - Children discovering floppy disks

If you put todays children in front of the highest technology of
thirty years ago, it happens ... a big moment of misunderstanding !

<http://www.youtube.com/watch?v=3DgdSHeKfZG7c>

Thirty years ago, I was discovering the Sinclair ZX81 personal computer,
and programmed my first Breakout game, reading its assembly language
listings in the "Ordinateur Individuel" magazine. The faintest error
typing with the hexadecimal unreadable code, would conclude an
unrecoverable crash of the computer. And there was no backup at all
(I installed a backup tape recorder later). This is to tell that one
must have a prodigious self-control to obtain the racket and the
brick-wall above it.

The Breakout game is the creation of Steve Jobs and Steve Wozniak
when they worked for the ATARI Corporation leaded by Nolan Bushnell.

When I later changed in 1986 my first computer for a 1040STf, this
was a revolution ! Which one of us remember that we could program
with Lattice C, write with Signum, draw with Degas Elite, play with
Joust, listen music with ProTracker, model 3D shapes with Cyber Studio,
and we were all waiting the 720kb floppy disk from our magazines ?

30 years later, what makes the difference with the early computing ?

<http://eureka.atari.org/trenteans.jpg>

Are the social networks better than computer clubs happening before ?

ATARIstically yours =3D)

Bon Jour!

Nice Video. I wonder from where did he know how to scratch a turntable.

Anyway, it seemed that they know much more about the older stuff than I would have expected ;-)

> The Breakout game is the creation of Steve Jobs and Steve Wozniak
> when they worked for the ATARI Corporation leaded by Nolan Bushnell.

I can remember it, my brother was very fond of... maybe I was 6 or 7 then.

> 30 years later, what makes the difference with the early computing ?

Nothing. I am still using the ZX Spectrum and my ATARI 1040STf will see a few updates soon. Kaos TOS 1.04 and 2.5 or 4 MB of RAM. An ACSI-CF Adapter will follow afterwards :)

> Are the social networks better than computer clubs happening before ?

What social networks? ;-)

```

That's nice. I still have a Falcon30. My Sinclair ZX81 is out of order.

>> Are the social networks better than computer clubs happening before ?
>
> What social networks? ;-)

Lol !

ATARIstically yours =3D)

LS

There is a new version available on my homepage (see sig)

Changes:
february 17 2011
v4.4

Compiler:
Fixed a bug in switch statements when a table is generated.
The problem only occurs in leaf functions (no further calls).
A argument register was not saved.
Fixed a regression where redeclarations of variables
were not anymore rejected.
Bitfields now also work with option -i (type int is 32 bits).
The fields are packed into a 32 bit word.
Code rearrangement such that (a##b##c) is now correctly
retokenized.

Assembler:
Fixed a regression where C style #if* directives were
handled incorrect resulting in strange error messages.
Fixed a regression where local labels within a module
were incorrectly matched to equally named local labels
in previous modules.
Implemented scope for dot prefixed labels.
(local between non dotted labels)
Labels within modules couldnt be exported. Fixed.

Library:

```
    Added missing function 'ceil'
    Added SozobonX gemfast replacement 'gemf.lib'
       The lib is a wrapper around ahcc's gemlib.
    New include files unistd.h, sys/stat.h, sys/types.h
       These replace functions in ext.h and hence are
       included by ext.h.
    Fixed a bug in sleep(). The bug prevented sleep()
       from sleeping.

Linker:
    Removed redundant debug messages about doubly defined
       names that could result in a crash.

Just tested with tstscr_f.prg and memory-protection: No problem.
No messing with auto-folder, additional helpers etc. I think it's usable.

Would it be possible to also output the parameters of the calls?

Is it possible to trace the VDI-calls from the builtin desktop?

-Helmut

Waow, good news!

> Would it be possible to also output the parameters of the calls?

Yes of course, but it would be a greater work.
If I have some energy, I'll try it.

> Is it possible to trace the VDI-calls from the builtin desktop

Supposing that VDI calls are made from AES calls, they all are done in Supervisor mode, and if the AES is in ROM, then the calling address is easy to identify.

Else, I think that the desktop has a VDI Handle of 1.

But... As there is no START or END of the desktop, when to save the files?

WIth a key combination such as Alt+Help to start/stop recording
and Shift + Alt + Help to save.

ANd SYSREC should be installed as a TSR to go on working with the desktop.

Well well... another idea for sure...

Guillaume.

Not THAT good any more: It works nearly perfectly when run from =

commandline, but crashes my system when started by XaAES-launcher. But =

cli-mode is sufficient for the start. But it does not read the sysrec.in=
f =

when started from cli.

>
>> Would it be possible to also output the parameters of the calls?

The handle of the physical workstation is 1, I guess the virtual has 2.

I imagine to start it from mint.cnf, set it up to trace a process called=
=

"GEM", save e.g. VDI-calls (with parameters) to a file.

     That's the answer I wanted to write !!!

     From the AES, it should be installed as an application with its
directory as default to find SYSREC.INF.

This worked right away. The crash is not related to memory-prot, but to =
an  =

old MiNT/XaAES-bug, so don't bother.

Now an option to start/stop at any time without launching another prog, =
 =

maybe filter for callers adress or similar - I need the VDI-calls of the=
  =

desktop!

Hi

Not been in here for quite a few years.. and I still recognise some of the names posting in here. :-)

I'm going through a much needed clear out right now and have the following available.. I bought them all brand new way back then and used them..

All software comes with the necessary manuals.

MagiC PC v1.2 with Ease
NVDI 5
Jinnee Desktop (no manuals because did not receive any)
Imagecopy 4

I also have:

The Atari Mega Archive CD - Volume 2 (looking at it last night, I had forgotten my involvement in creating it - so was shocked to read my name in the readme file ;-)

A CD of the full HENSA/Micros Atari archive from the mid-90s - self compiled

The Atari A to Z encyclopedic book by Mark S Baines.

Any interest? Although I'm in the UK, I can post pretty much anywhere.

Regards
Denesh

     Hi!

     Interested in that! MagicPC and Ease/NVDI/Jinee
     If no one else want it...
     My e-mail is valid,

     Guillaume.

Megamax Modula-2 is free for download from the author's site:

<http://www.tempel.org/files-d.html>

Now, if anyone has a Signum! to ODT or PDF converter at ahnd...

Thorsten

A few years back, when I bought a new Mega ST2 motherboard, Brad and his tech(s) at Best Electronics upgraded it to a Mega ST4 before they sent it to me. Might check with them.

Hi,

If one of yours is interested in 3D, and knows K3DSurf like me

<http://k3dsurf.sf.net/>

you may have noticed the following K3DSurf forum discussion
at <http://k3dsurf.s4.bizhat.com/viewtopic.php?t=3D145>

A K3DSurf user ask how he would describe the "Snail" surface
<http://www.3d-meier.de/tut3/Seite38.html> and the author
replies him (in English) how to do so.

With Eureka 2.12, in order to describe the "Snail Surface"
you just have to load the hereafter formula, which is the
equivalent Parametric 3D (rho,theta) surface

```
<CUT "snail.fmu">
Do not put more than 65 characters per line of formula !
"r*cos(t)*sin(r)"
""
"r*cos(t)*cos(r)"
""
"-r*sin(t)"
""
"K3DSurf formula"
""
""
""
""
""
_____________________ Optional ______________________
"0 2*pi"
"-pi pi"
""
"-10 10"
"-10 10"
"-10 10"
"44 11 5"
</CUT>
```

and you will obtain the following POV-Ray script exporting

```
<CUT "snail.pov">
// File exported by Eureka 2.12. Designed by Archimedium 2007
```

```

light_source { < 1, 1, -1> color rgb 1 }

object { box{-2,2 inverse} pigment{color rgb 0.9} }
</CUT>
```

You may then render this surface with a POV-Ray 36 images animation, and clock (time in POV-Ray) varying in [0 to 5.0] time range.

You will obtain a kind of helix rotating around its axis like

<http://eureka.atari.org/snail.gif>

You may display it with zView with an ATARI, like that screenshot

<http://eureka.atari.org/snail.jpg>

Have you launched your ATARI and Eureka 2.12, today ?

ATARIstically yours =3D)

Hi all,I have aquired a supradrive 20mb and I think it came from Canada with
a 115v input.Does any one know if it is dual voltage as my power supply is
240v,or do I have to find a transformer. Many thanks.

I don't think autosense PSUs were around then so you need a transformer
(unless it has a switch or link somewhere)

I am pleased to announce... the Seattle Retro-Computing Society's inaugural meeting, on Saturday, June 25th, 2011!

Do you do any of the following with old computers near Seattle?

+ Use them
+ Collect them
+ Play games on them
+ Write programs for them
+ Develop new hardware for them
+ Help other people do any of the above

If your answer was "yes," as I expect it will be if you're reading this near Seattle, then the SRCS is for you! We exist so you can show off your awesome stuff, bounce ideas off of fellow enthusiasts, and be inspired by one another's achievements, plans and aspirations.

No idea is too big or too small, and we're not picky about what flavor of vintage machine you prefer! Come on down and tell us about it!

The meeting is graciously hosted by the Living Computer Museum, a
relatively new organization which is building a computer museum in
Seattle's SODO neighborhood. There will be refreshments, presentations
on various vintage topics of interest, and enough table space & power to
set up anything you may want to show off!

For further details, please see our page at http://srcs.nfshost.com/.
Hope to see you there!

Greetings,

After updating my Studio, I have a very nice Atari Falcon 030 left over For Sale.

Anyone looking to purchase one should get in touch with me.

I can sell you a basic system, or with extra goodies.
Some of the extra hardware I have can be hard to find, so you can basically have the Falcon you want, depending on how much you want to spend.

I can provide photos of course, but please only respond if you are serious in
buying a Falcon.

Most people know about what a basic Falcon goes for on E-Bay if you can find one.

Original Box, disks, Manuals are included with a basic Falcon. And is very Clean!
I can supply new cables, memory upgrades, VideoMaster Falcon Cart.,
BlowUp hardware Screen Enhancer, Vidi ST12, Original Falcon Software,
Original Atari CD Software, FalconSpeed 286 card with software and manual,
And many other extras.

Get in touch with me at phantomm@suddenlink.net
I will provide a phone number so we can discuss it after sending me a e-mail. I'd like it to go to a good home.

Sincerely,
Barry

Greetings,

Have various hardware and software for Atari ST/STe/Falcon for sale.

Things such as, Blitz Cable with software, Happy Discovery Cartridge, Spectre GCR cartridge with software and manual, Vidi ST with Splitter software and manuals, New Cables, SuperCharger with software and manual,

External Disk drives with new cable,

Hand Scanner like new in box with latest software and manual.
Notator Logic software package with the Emagic LOG 3 Cartridge and
C Lab UNITOR 2 cartridge.

Have a nice FlatBed Color Scanner with Software for excellent Color Scans.

Apex Media Software Package like new with Manual.

Also, have parts for an Atari STacy 4meg unit with harddrive.

And various parts for a Atari Falcon 030, such as 1meg, 4meg, 14meg Ram boards,
2.5 internal IDE hard drive kit, motherboard shielding, Top and bottom case, motherboard, Power Supply, internal disk drive and etc.

Looking for that special piece of hardware or software??
Just e-mail me what your looking for, as I may just have it.
Been collecting Atari related items for years.

Contact me at phantomm@suddenlink.net
Phone number will be provided for discuss of any items.

Sincerely,
Barry

Greetings,

Looking to buy or trade for Atari STe, MegaSte, and Falcon 030 internal hardware upgrades, such as Nemesis, Afterburner, graphic cards, CPU upgrades, Expose and ScreenEYE digitisers, and the like.   Working or NOT working.

Also, interested in any Falcon030 Music related hardware for the DSP port and etc.

E-mail me what you have for sale and or trade.

phantomm@suddenlink.net

Sincerely,
Barry
phantomm@suddenlink.net

Haven't had any of my Atari computers running in over 5 years, I keep telling myself to get them set up, but life gets in the way.

Is is possible to install TOS in a virtual machine program? I have Parallels Desktop for the Mac installed, and have XP and Vista installed, working at getting Puppy Linux 5.25 running.

The recent post about ARAnyM got me to thinking about it. I've got some Atari software I would sure like to easily regain access to.

NO, you need an Atari emulator of which there a number. ARAnyM is but one...

For a general classification, let's call it productivity software. I'm not a gamer.

The one's that come to mind immediately are:

Calamus SL 98
Papyrus
InShape
DynaCADD

And others.

Of course, the ability to get it into a file I can save, print, export, etc. out of the emulator should be obvious. :-)

Obviously from the sig, I'd prefer it runs on a Mac. But, I do have a good XP/Vista dual boot machine here also.

I do miss the Atari days. :-(

Do you know the following WEB site, and related applications ?

iCalamus <http://www.icalamus.net/icalamus/index.php?lan=3Den>
Papyrus OFFICE <http://www.rom-logicware.com/>
InShape III <http://inshape.lutece.net/>

The interesting thing in ARAnyM's use, is about softwares that you
won't get natively on your non-ATARI host machine. There's quite a
lot, apart from ATARI applications that were already ported elsewhere.

ATARIstically yours =3D)

Isn't that Darek Mihoka's (sp?) project? I've got an older PC version, I'd completely forgot about it. I think I looked at it one time, found it required technical knowledge to get it installed I don't have.

But I do have a Windows computer, I can always take another look at the current version.

But of course, the best thing would be to get the TT or Hades up and running!   : grin :

> InShape III <http://inshape.lutece.net/>

I knew that Papyrus was available for the PC, I found it while searching for alternative PC office apps to MS Office. It was nice to know they were still alive and kicking.

I knew Calamus is was alive, but didn't know there was a Mac version.

Did not know about InShape.

Another program I just remembered is PhotoLine, which I have the Atari version of. And I know they are alive and kicking.

For right now, I'm not sure I have enough need for any of these programs to purchase new and current versions. I think my needs can be met with the Atari versions. And if I were to use the software in some sort of "serious" mode, I'd get one of my Atari computers running before purchasing anything new.

Thanks for the information on the ported versions, though. I'm glad there are some Atari developers that have survived. I do just about everything I can to avoid the mainstream software, such as Adobe and Microsoft. I like competition. :-)

Does anyone reading this group have any knowledge about using a Spectre GCR cartridge with an Atari Falcon?

I'd appreciate any info on the subject.

Not compatible as I understand it, sorry. The Bus port is different
between it and the ST's.

It is a bit fiddley to get it working but for things like Calamus its great
because with the aid of some of the tools included you can use the entire
screen area of a PC monitor.

> But I do have a Windows computer, I can always take another look at the

Not sure it is. Getting a TT going especially with a graphic card is a real
slog.

The Hades should be a simple matter of setting it up.   :-) And the TT was working when I disconnected everything and took it down for the last move. But now, I have a black screen on bootup. Happened during a previous move too, and fiddling/wiggling the monitor cable fixed it. At the moment, I suspect an intermittent connection with the cable.

But it's a "time/space continuum" thing. I don't have much time, nor do I have much space to set them up in.   LOL

Hi there,

I am looking for people in the San Antonio, TX area that are Atari ST/
STe/TT/Falcon users.  I don't have mine with me currently, but I am a
big fan of the computers and wondering about knowing others that are
in the same interest as me.

That's great ! I didn't knew this ATARI ported application.
There's <http://www.tokitest.fr/> Toki Line Test or also
<http://www.xnview.com/> xnView which are great apps :-)

ATARIstically yours =3D)

LS

There is a new version available on my homepage (see sig).

Changes:

june 2011
v4.5
Compiler:
   Fixed a regression since 4.4 causing a alignment error
     when a bitfield was followed by a plain char declaration.

   Optimization of table switch such that large gaps
     between groups of close case values are dealt with
     efficiently.

   Correction in table switch for Coldfire code.
   Index scaling by shift: long.
   Promote unprototyped pushing of floats and ints.
   Fix l and f postfix with float constants.

Assembler:
   Digit zero is NOT a octal prefix in assembly files.

   Implemented * operand.
   Implemented 'dcb' statement.
   'repeat' statement can now be nested.
   Macros can have 'repeat' statements.
   Repeat value can be any constant expression.
   Repaired equ and = statements.

Library:
   Added atan2 to ahccstd.lib
   Moved a few local arrays in the VDI bindings to static.
     Savess some stack when used in PROGDEF's.

Have fun.

:) I did not know that there was Toki Line Test for ST and that
xnView start life on Atari :)

cheers !

:-) Everybody knows about iCab, of course ! <http://www.icab.de/>
The original name is Christal ATARI Browser by Alexander Clauss.
xnView is developed by Pierre Gougelet. I can't remember for Toki.

Best regards,

Greetings,

Looking for any DSP hardware for Falcon030,
such as Analog 8, Jam Out, and or DSP device
for MusicCom 2 as described in the manual.

Also, in the market for Atari Falcon030 hardware
upgrades, internal digitisers,
Working EtherNet or similar HighSpeed Net Devices
for Atari Falcon030 and MegaSTe, that I can purchase
or trade for.

Also looking for overseas contacts for trading atari
related hardware and software. Also purchasing.

Will purchase atari related items from overseas.

contact me at phantomm@suddenlink.net
with list of items you have for sale or trade.

Also, if looking for any hardware/software include
your want list.

regards,
phantomm@suddenlink.net

Has anyone tried to use any Amiga hardware boards
in a Atari ST/STe/Falcon??

Such as Genlock boards and some of there other items?

To me it would seem that some things would just need
a driver written.

Any links/Web pages to any hardware hacks that have been done?

Here are some photos from last Saturday's Atari Party, that I held (with tons of help from friends) in Davis, California:

http://www.newbreedsoftware.com/atariparty/2011/photos/

It was mentioned ahead of time in a couple local papers (Sacramento News & Review, The Davis Dirt, and I think also the Davis Entperirse).

PLUS, a few of us got to hang out in CW31 TV's green room during that morning's live broadcast of "Good Day Sacramento" to play games and talk about the event. I got my butt kicked at Mario Bros. on live TV. :^P

Links to even more photos, plus the video, can be found under the "Latest News" section of the 2011 event's home page:

http://www.newbreedsoftware.com/atariparty/2011/

Enjoy! And thanks to everyone who came to show off their game systems and computers, the volunteers who helped us set things up and clean up afterwards, and of course the many sponsors who helped pay for the event and donated lots of give-aways.

BTW, we had over 100 people show up (based on raffle ticket counts, there were at least 100 people; though we stopped giving them out when we did the raffle, about 3.5hrs before the event ended, so it could've been closer to 120 or 150, for all I know!)

Hi,

ARAnyM v0.9.11 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed
<http://eureka.atari.org/miniPack.zip> It is now updated because
there's a new 0.9.11 version released. It supports

`MacAranym` allows launching on PPC Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with both
Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

mint

ftp://kurobox.serveftp.net:3021/mint/conholio-0-8.tgz (349.729 bytes): Conholio sets out to replace other consoles like eg. Toswin with a faster and more accurate solution. This project is developed specifically with XaAES in mind but chances are it is useable under N.AES as well.

multitasking

ftp://kurobox.serveftp.net:3021/multitasking/myaes/myaes093.zip (614.009 bytes): The goal of MyAES is to provide a free, fast, reliable and modern AES. It should be at least as good as "standard" AESes (MagiC and NAES are the references)

ftp://kurobox.serveftp.net:3021/multitasking/myaes/myaes093-patch.zip (89.167 bytes): Realtime windows move can't work, number of pixels for transparency can't be set in myaes.cnf - this are specific bugs to 0.93 version

programming

ftp://kurobox.serveftp.net:3021/programming/ahcccf-v44.zip (867.839 bytes): AHCC is a Pure C compatible C compiler for Atari ST and its offspring. Coldfire version

ftp://kurobox.serveftp.net:3021/programming/ahcc_hyp.zip (156.829 bytes): Hypertext documenation AHCC

ftp://kurobox.serveftp.net:3021/programming/ahccst-v44.zip (741.778 bytes): 68000 version. AHCC is a Pure C compatible C compiler for Atari ST and its offspring.

ftp://kurobox.serveftp.net:3021/programming/ahcc-v44.zip (838.929 bytes): 68020 version. AHCC is a Pure C compatible C compiler for Atari ST and its offspring.

utilities

ftp://kurobox.serveftp.net:3021/utilities/desktops/tera403g.zip (85.468 bytes): German Resource file(s) and Hypertext for TeraDesk 4.03. No changes in resource, just updated hypertext.

ftp://kurobox.serveftp.net:3021utilities/desktops/tera403b.zip (322.176 bytes): This is version 4.03 of the Tera Desktop, a replacement for the builtin TOS desktop for 16-bit and 32-bit Atari computers. (English version)

ftp://kurobox.serveftp.net:3021/utilities/desktops/tera403s.zip (611.718 bytes): Source of Tera 4.03

Have fun,

Martin

Hi,

the new version 2.0 of the TT/Falcon/Milan NVRAM configuration tool
BOOTCONF is now available. The main features remain the same, but the
GUI has been updated to use a more moderen look and feel.

BOOTCONF can be downloaded from

http://www.seimet.de/atari/en/index.html

Best regards

Uwe

You should keep these rules in mind for the ACSI/DMA bus of the Mega STE:

- The drive must not require initiator identification. Some drives
require the computer to have a SCSI ID of its own, but the Mega STE has
no full-featured SCSI bus (only ACSI/DMA) and does not provide this feature.
- You can only use 1 GByte of the drive's capacity, even if the drive
has a higher capacity.
- Parity should be switched off, the Mega STE does not support parity.
- The drive at the end of the SCSI chain must be terminated. An active
terminator is recommended.
- The cable to the drive should be short.

Best regards

Uwe

Hello,

I managed to put a AlberTT gfx card into a MegaSTE, I had to disassemble
the two drivers written by Draco to adapte them to the 68000 and STE.

Now it works!

I have a question with Magic: what should be the order of the drivers
and the magic-boot-loader in the Auto folder?

I made two photos to show the thing:
http://gtello.pagesperso-orange.fr/machin.htm

I'll upload later the drivers with commented source.
Is Draco still active? Can he be joined?

Guillaume.

Which Atari programs can print to this printer?

Actually, what's the latest DJ that can be used on Atari?

Thanks!!

Hi,

What program can perform a serial link between TT and MegaSTE using the 115200 baud rate?

I wasn't able to achieve this with ST Trans, even with the CPX configuring the default port.

I don't need a network program, just a link to transfert files.

Guillaume;

Hi Guillaume

You can try with ParCoPy; MegaSTe <--> TT, over 65Kb/s.

     It is with a special parallel cable, isn't it?
     The problem is that the computers are far from each other (i am using a
15meters serial cable!).

     Guillaume.

In such case, you'd better use the LAN-port, since the signal
integrity is much better for balanced transmissions.

Connect or other terminal programs can achieve what you're talking
about?

Hi,

The following WEB sites are missing

<http://www.sillyventure.pl/> SillyVenture 2k10

<http://evolution.ifrance.com/> Evolution Home Page
<http://mikro.umpc.sk/> MiKRO's homepage ! (Games)
<http://www.ataritt030.info/> ..:: Atari TT 030 ::..
<http://atarigames.atarizone.com/> atari.games - french connection
<http://www.ifrance.com/Evolution/> Evolution Home Page

May we have news from their maintainers ?

Best regards,

Well, it's certainly not dead, it's just atari.org still isn't updated
(I wrote to support and evil/dhs but seem to be busy) -- in the
meantime you can use mikro.naprvyraz.sk instead of mikro.atari.org

Thanks a lot. atari.org subdomain should follow your WEB site, if you
ask at the support mail service. I'm glad to know your new coordinates.

Best regards,

Hi all,

I wrote a new page about the MegaSTE with:
- a AlberTT gfx card installed, drivers on line
- the FPU installation (a MC68882)
- I am working on adapting my software

http://gtello.pagesperso-orange.fr/mste_e.htm

Guillaume.

The FPU test was made before installing the FPU, and you can notice that the Mega STE is faster than a Falcon!!!

Another Mystery!

That's pretty impressive. I have a MegaSTE sitting on my desk, next to a
Falcon to this day. :-)

It's now fixed. That's because I maintain the ATARI Search Engine.

<http://eureka.atari.org/atari.html>

Thanks,

Best regards,

     Thanks!
     If Dieter doesn't answer, I think I can offer this patched version as
it remains shareware. I do not "crack" it.
     I used the email: dieter arobace his name dot net. If someone knows
another way to reach him.

     Guillaume.

Hi again,

The patched version is on my page.
I'm afraid that, for those who have a registered version, you'll find again an unregistered one... I think I used the place reserved for registering infos to put my piece of code. That is to be verified.
(is the shareware limitation only the delay you have to wait at start??)

My version only works on a 68040/060 as there was not enough place to make a routine that reads the "_CPU" cookie and that validates my patch only if it's higher than a 68030.

You can have both versions on your computer GV_060.APP and keep the other GEMVIEW.APP for example when you use the Falcon mode again.

http://gtello.pagesperso-orange.fr/falcon_e.htm

Guillaume.

hello
THE AIX TT, hasn`t it 2 x PS/2 spaces for PS-2 SIMMs?
one of my double sided SIMMs has on every side 72 pin, that is alltogether 144 pin. there is a jumper in the jumper array, but did aix-tt anyway need jumpers to be set?
any documentation availlable (PDF) or send me link thank you

> offset $3B874. Its some string that says "Warning..." about some floating
> point lib, its never displayed, just clobber it.  ;-)

     Great info, I'll change that.

     I'm working on Zero-X now to make it run on a graphic card in 16 bits
mode (then 24 and 32).

     Guillaume.

Hi,

I think it works now... A little launcher for Zero-X (an sound editor
with DPS option) to make it use correctly the 16 and 32 bits color mode,
either on a Falcon+CT60+CTPCI or a TT with a graphic card.

You'll find it at the end of the page:
http://gtello.pagesperso-orange.fr/falcon_e.htm

Guillaume.

A french user reports that he has no problem with Mint 1.17 and Xaes. So, this could be a problem for me (I made the test with Mint 1.15 and Multitos).

Guillaume.

The ATARI St has only 16 colors, no sprites, no scrolling and a really crappy soundchip.

The AMIGA is much superior.

So better throw away your ATARI and get a Commodore AMIGA!

If I'm not badly mistaken, you're the same jerk who started a
similar idiotic thread over at comp.sys.atari.8bit...

Don't feed the troll folks... :)

Xref: g2news2.google.com comp.sys.atari.st:2918

Hi again,

Here are two more things:

1) I disassembled and rewrote a part of NOVACAL (the screen driver for Calamus originally for NOVA graphic cards). It was mostly necessary when running in 16 bits mode on the CT60+CTPCI because there, Calamus used to display weird things.
So, Calamus can now run on every 16 bits mode (either 15 or 16 bits used) and every endian (Big or Little).
NOVACAL can also be used in 24 or 32 bits if the encoding is not the Calamus native one.

2) Once NOVACAL ready, I experienced problems with Calamus at startup when loading modules, always the same problem with the instruction cache not updated. I was about to patch Calamus when the idea of a universal launcher came: I called it RUNME1ST.

With it, you can run any program and it flushes the caches each time a file is loaded by the program (supposing it can be an executable module).
I added a delay option: after this delay, the caches are not modified anymore (better performances) supposing that modules are generaly loaded at start.

Well, it's the same idea as the "5s" delay with the CPX CT60 but it only slows one program when this one loads one file, and not the whole system.

I'll add this tonight on my page.

Guillaume.

I sold my ST after I bought my Amiga and never looked back but that was
years ago. I still have a few Amiga's, and if I ever came across an Atari 8
bitter I would snap it up. They're pretty rare around here though.
If I ever saw another STfm it would be too soon...

I've had, in order, an A1000, an A2000, and 2, yep 2 A1200s. Bought them, played with them, sold them. Of them all I actually liked the A1000 best, especially with that recessed keyboard and incase signatures of the original team.

I still have all my Atari's. 1 Lynx, 1 Jaguar, 1 800XL, 1 Mega ST4, 1 Mega STe, 1 STacy, and one CT60'd Falcon. They are all keepers. One man's garbage is another man's treasure and all that I guess. :)

I wrote that GEMVIEW could be launched by Runme1st with the Delay
option. That's false as GEMVIEW reloads its modules each time they are
needed. So the patch can't be stopped after a few seconds.

You can still use Runme1st with no delay...

Anymay, I rewrote the GEMVIEW patch with Lonny's idea: now it doesn't
recover the registering infos anymore.

Hi,

I am working on PD60 sources from a disassembly I made.
Everything seem to be fixed now, I can assemble and the executable runs.

Some jump tables remain with absolute offsets, but well, that's a
starting point.

Can someone work on it to fix those redraw problems on CTPCI ????

Guillaume.

Let's not get into this. This is old crap. If I wanted an Amiga, I would have bought one. I own two Falcon's, a Ste and about 5 ST's. I have no intention of ever getting rid of any of them even afer I get the new Coldfire Atari. So Lloyd, take a hike....

Hi,

there are still people like Tony Simsig who think that women are too stupid to program software for computers and to prove him and other men who think so wrong, I've created the group "ATARI Girls":

http://groups.google.com/group/atari-girls

This is a group where female programmers can show their programs, tools and games.

Men may also join, but I don't want guys like Mr.Simsig on the group, since I hate flame-wars.

On the group, girls may show what they're capable of. You can send your code to atari-girls@googlegroups.com by email. You may also send executable files and screenshots as email-attachments.

If you need more room, you can use other services for hosting your data and you can then provide the links.

This is no dating group, so men, please do not approach girls.

And now, have fun,

ATARI Girl

Cool idea!
Women are the future of Atari?

Guillaume.

If they say that, ask them who programmed one of the great games called
River Raid :-) You go girls, anybody can do it, just need effort

Should not be needed really if people were not so set in their ways I suppose.
Personally, I've never seen why one would suggest any gender is better than the other at programming, its just what you are interested in and grasping concepts after all.

Maybe its just men who like playing with old stuff, or that might be seen as daft!
Nostalgia ain't what it used to be.

Brian

Hi,

I put the source code of PureDebugger 60 on my page (I made it with the excellent strange TTDigger V7).

I started commenting the LineA, AES and VDI calls. If someone wants to help finding the bug in the display with CT60+graphic card, he is REALLY welcome.

Few differences are to be noted between assemblers, I use ASSEMBLE with TEXT, DATA and BSS. I think that some other use ".TEXT", ".DATA" and ".BSS", this will be easy to adapt.

You'll find it in the Software section of this page:
http://gtello.pagesperso-orange.fr/falcon_e.htm

Guillaume.

Guillaume Tello <houten.van@orange.fr> worte:

> Could it be that MagiC uses this trap???

I can not see that MagiC use this Trap, maybe an other program

Nothing about your problem. But if you use some Traps please tell this in some newsgroups, so that I can add this to tos.hyp[1]

An other thing, please use the XBRA method for change vectors:
http://toshyp.atari.org/en/003009.html

In assemble (example)

```
-------------------------------cut------------------------------
             DC.b 'XBRA'
             DC.b 'RSVE'          ; change to your ID
oldxbiosv:   DC.l 0
t14_xbios:   your new function
-------------------------------cut------------------------------
```

Wiht this method can tools like SysInfo show what program are hooked in vectors.

An example from my Milan

```
-------------------------------cut------------------------------
Adr   Vektorname       Programm-ID
----------------------------------
0070  AVI L4/VBlank    NVDI
0084  Trap#1/GEMDOS    DYJT->Trpp->EPro->CHN1
0088  Trap#2/AES+VDI   MN3D->ICFS->Trpp->NVDI
00B4  Trap#13/BIOS     Trpp->CHN1->RSVE
00B8  Trap#14/XBIOS    Trpp->NVDI->EPro->CHN1->nTOS->RSVE
0114  STMFP/200 Hz     SCKM->TREN
-------------------------------cut------------------------------
```

I don't know if it helps you, but here can you find a patch program for the PureC Debugger.

http://www.dimitri-junker.de/html/software__atari.html
(look to "Programming tools")

Hi, it looks like the user reported a false error. The problem came from another thing. So this is solved.

> Nothing about your problem. But if you use some Traps please tell this in some
> newsgroups, so that I can add this to tos.hyp[1]

Okay, but the Trap is only used during the execution of Zero-X, it is not resident.

```
> An other thing, please use the XBRA method for change vectors:
> http://toshyp.atari.org/en/003009.html

     SUre that's better! I never did that but it's never too late!

     Thanks!

     Guillaume.

Hi,

ARAnyM v0.9.10 <http://aranym.org/> is the ATARI Virtual Machine
from which a minimal configuration, the *miniPack* is distributed=20
<http://eureka.atari.org/miniPack.zip> It is now updated because
there's a new 0.43 release of the GEM desktop TeraDesk included.
It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

Hi,

The *miniPack* <http://eureka.atari.org/miniPack.zip> is now also
updated with freeMiNT 1.17.0. It is dedicated to the memory of
Frank Naumann who did so much with MiNT <http://sparemint.org/>

Enjoy, it's yours =3D)

Hi,

Is there a tool to keep track of every system call performed by a program under TOS?
(gemdos, bios, xbios, VDI, AES) ??

Thanks,
Guillaume.

Hi,

I got in touch with one of the programmers of Zero-X.
We talked about the adaptation of the program to the CT60.
He is very pleased to know that the program is still in use and he tries
to find the sources to modifiy the program in two ways:
- the adaptation to the new graphic modes (16 bits and up)
- the use of the TT Ram

Nothing is done for now, we're just talking! But who knows...

Guillaume.

MANITOR works BTW also very fine under MagiC and then it can as well
be too controlled through SCRIPTER...

Like Fidel-Sebastian wrote, there is Manitor, but this need a mutitasking
system. I use it only with MagiC.

You need a GEM script interpereter (Scripter or GSExec) to control Manitor.

I should make a new release the 1.02 is very old.

Gerhard

It may be possible to recover the chip in an external programmer. In any case the PIC chip is very chip you just need to find some one close to you with a programmer...

Hello Piotrek,

Maybe you can get it work again by plugging a joystick in the A port and start the computer holding the fire button.

Regards,

J.-Luc

LS

There is a new version available on my homepage (see sig).

Changes:

october 30 2010
v4.2

Compiler:
     Removed error "bool not allowed".
     Fixed a rare case where logical expressions with && or ||
     including constants were not handled properly.
     pe
     if (VERSION == DEMO_VERSION && c < 0)
     where upercase identifiers are constants and c is a variable.

     Fixed wrong code for comparing a double to a integer constant.
     Fixed assignments of the form a = b = c
```

where a and b are doubles.
Accept '=' with options -I, -D

Assembler:

Fix in preprocessor.
endif directive was not detected properly resulting in "error 1 #endif missing".

implemented directives:
.extern, .ifne, .iff, .ifeq, .ifle, .iflt, .ifge, .ifgt

labels without ':' must begin at position 1 of a line.
This assures typos in opcode mnemonics are rejected.

Fixed 'wrong processor type' message.

Shell:

If AHCC cant find header files, setting maximum verbosity will display in the journal which paths AHCC has tried.
(Maximum verbosity = all 4 v's in the KIT.)

Implemented project file option .S
.S options are passed when compiling assembler files.
(extension .S)
When the option is present it is passed to .S files only.
If absent, the .C options are passed to all source files including .S files.

Editor:

Fix in detecting changes in files with Unix line endings resulting in false positives when closing.
Undone changes were falsely reported as change.
Not dangerous but Annoying.

With option 'visible tabs' active, AHCC now also shows trailing white space. Usefull when comparing files.
The small triangle is used.

When 'visible tab' is inactive, compare files (^2) no longer takes trailing white space into account.

So, when 'compare folders' marks files as changed and ^2 doesnt find a change, you can be sure that its only trailing space that is the difference.

```

Hi all,

I have started a page with Atari Benchmarks using Olivier Landemarre's KRONOS.
A really cool piece of software that runs from the ST to Aranym on a new PC!

As it's the first day of thoses pages, there are few configurations tested (mine!): a STE, a TT and a Mac Quadra using Magic Mac.

If some of you have some time, you can send me your benchs! The link to Kronos 2.01 is on the page, just download, run all tests and save the result in a text file (ABH extension). This one is to be returned to me or to Olivier.

(my email address is valid).

Here is the link:
http://gtello.pagesperso-orange.fr/kronos.htm

(pages in french but there is little text to read and more graphics to view!)

Especially wanted! Mega STE, Falcons (with or without accelerators), Hades, Milan, TT with graphic cards, etc... If you own a particular config (a ST with PAK030)...

Guillaume.

Let me precise that most graphics have a logarithmic scale.
So, at each step, the power is doubled! (not only +1, but x2).

Guillaume.

FREE Gift For November's Customer Appreciation Month! Time For Giving Thanx!!

All Atari 20% Off! All Atari 20% Off! All Atari 20% Off! All Atari 20% Off!

I've added NEW items to my Atari Catalogs! To my Atari ST Hardware Catalog I have added a couple of 1040STFM Computers Boxed with TOS v.1.4 and a Mega ST2 with TOS v.1.2 upgraded to 4 MegaBytes of RAM! I have switch boxes for Both MoDeMs & Printers like on the Atari ST! Also, I've added some Mice for Atari!

I've ADDED LOTS of NEW IN the BOX Titles To my Atari 8 Bit Software Catalog! I've received Lots of Educational Games & other Software for the 8 Bit Atari! BRAND NEW NICE BOXES Factory Sealed BOXES of ATARI MADE TITLES, MANY TITLES!!

I'm expecting a shipment of Atari 65XE, 130XE, Rana & Atari 1050 Disk Drives! I've ADDED Models of FACTORY NEW IN the BOX SUNCOM Joysticks! I've also got the Classic Black Atari Joysticks with Red/Orange Fire Button and Markings!

NEW FREE Catalogs for NEW & USED Classic Atari 8 Bit & ST Computer Lines Plus Magazines & Atari Club NewsLetters as well as Atari 2600 & 7800 Games! Eight Catalogs in all! View Catalogs on-line, Download them or Feel free to Request catalogs by E-Mail! Really, it's not an inconvenience! Please specify 8 Bit, ST, 2600/7800, Magazines and Atari Club NewsLetters or ALL! Then I'll send them to you by E-Mail! Let me know if I can attach files to your E-Mail! Goto http:\\BensCatalogs.Atari.org E-Mail BenSells@Atari.org or call(503)256-9974!

To expedite your order, Download Catalogs, Delete what you dont want, E-Mail me the rest! Please include your Mailing Address so I can figure Postage and Handling so I can expedite your Order! My Atari SoftWare and Book Catalogs are sorted alphabetically by Title so E-Mail your Want Lists to Bravo Sierra!

Hi,

Thanks to some results sent to me, the Kronos benchmark page is getting
more interesting. Now, there are some Mega STE, falcon, and a wonderful
CT60/CTPCI clocked at 105 MHz!

http://gtello.pagesperso-orange.fr/kronos.htm

Guillaume.

Hello All,

There is a new external module for Calamus. It is called
High Rez Data. It takes data from a frame, page, or the whole
doc and puts it anywhere you want on your hard drive. This

is perfect for a computer like my 16meg Falcon. Now docs print much faster (30-60 minutes for docs with lots of graphics, now take about 3-5 minutes). Things will even get better when I get the Coldfire FireBee. If any of you have Calamus, I would get this module.

Falcon030 with 16meg of ram

Hi Edward. Do you have a link or website for that new module?

Thanks!

The Fine Data Manager is not new. It's already on the market since some
time.
See <URL:http://www.calamus.net/modules/hdm.php?lan=en>

HTH,
Martin

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

```
Package                                   #                Architecture
```

aranym-0.9.10.linux.x86_64.rpm	73	AMD64
aranym-0.9.10.linux.ix86.rpm	79	ix86
aranym_0.9.10.linux.amd64.deb	45	AMD64
aranym_0.9.10.linux.i386.deb	157	i386
aranym-0.9.10-cygwin.zip	965	i386
aranym-0.9.10-macosx.dmg	485	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	880	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (354), Windows (965), Macintosh (485) =3D total 2684.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Hi,

Here is an interview with Nolan Bushnell, member of the ATARI board

     <http://news.cnet.com/8301-13772_3-20022604-52.html>

He is asked about the future of software, and thoughts about the firm.

That's interesting.

ATARIstically yours =3D)

It was interesting. I'm not sure I agree will all of Mr. Bushnell's predictions, but it is still something to think about.

Amazing how naive geeks can be to think that the very things
everybody leaves behind everywhere could be a safe, theft free
identification.
Ones fingerprints

Hi Ron,

Just go to the Inverse website and go in under "Modules" and
then scroll down. You cannot miss it. The manual is
unfortunately in German, but there is an English explanation
which pretty much somes it up.

Hi,

Kronos benchmark page is updated with two new results:
Falcon with a FPU 68882
Milan 68040/25MHz

Comparisons between the Quadra/040 and the Milan is interesting. The same for the two Falcons: one with a FPU and the second with a Speedres card 40MHz.

http://gtello.pagesperso-orange.fr/kronos.htm

Guillaume.

Hi again,

The translation to english is done! Now you can view the pages with two columns: french on the left and english on the right!

Please, see the "SOFTWARE" page, I need some people to make the two tests with M_Player (everything in one archive, it's easy!).

And last, if some people could prepare a test, for example about:
- fractals calculations and display
- a "C" compilation
- a graphic filter to apply
- etc...

And prepare a ZIP archive with explanations, I would be able to add
their test on my page.

Thanks!

http://gtello.pagesperso-orange.fr/kronos.htm

Guillaume.

LS

There is a new version available on my homepage (see sig)

Changes:
november 28 2010
v4.3
Compiler:

Fixed wrong mode bits in Coldfire 'fmovem.d reglist,(A7)'.
Fixed typo in "unknown mnemonic" message.
Skip rest of line after above message.

Improved code for comparing bitfields to zero
and assigning constants to bitfields.
Replaced flagwords operated by |= resp. &=~ by
bitfield definitions.
For instance:

```
in stead of  'flag |= FLAGNAME resp. flag &= ~FLAGNAME',
         now 'flag.flagname = 1 resp. flag.flagname = 0'
```

without increase of code.

Repaired warning 'value too big for field',
which was never issued due to a typo.
Also made sure the generated code conforms to Pure C
in this case.

The include folder can now be used by both Pure C and AHCC
in all case. The sinclude folder is only needed when
compiling AHCC* itself.

Assembler:

Implemented directives 'ifd' and 'ifnd' as synonyms
for 'ifdef' and 'ifndef'.

A expression of the form (label1 - label2) can only be
resolved when the labels are NOT advance references and
when the labels are in the same area (or module).

This might be repaired in the next release. It will
take some contemplation and time.

Hi,

I have a problem with the Fileselector and Magic (MAgicMAC in this case).

I want to return a mask as the filename: example IMG*.TGA for the
program to load the whole set of images.

With TOS, no problem, but with Magic the fileselector searches for the
first file matching the mask and returns IMG0000.TGA!! So my program
only sees one file and not the whole set.

How to do??

Guillaume.

Just went there, yep - sure what it looks like! lol

Oh wait, its "he's"...not "she's"...he's talking about some
rich guy his girlfriend left him for...

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	57	AMD64
aranym-0.9.10.linux.ix86.rpm	60	ix86
aranym_0.9.10.linux.amd64.deb	39	AMD64
aranym_0.9.10.linux.i386.deb	176	i386
aranym-0.9.10-cygwin.zip	1155	i386
aranym-0.9.10-macosx.dmg	565	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	261	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (332), Windows (1155), Macintosh (565) =3D total 2313.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Hi,

More Kronos results were sent to me, in particular a Milan 060/50MHz.

http://gtello.pagesperso-orange.fr/kronos.htm

If a Mega STE owner could spend some time on the two tests POV and
MP_STE that can be seen on the software page:

http://gtello.pagesperso-orange.fr/kronos_soft.htm

Thanks!

Guillaume.

Hi Ben! I don't have one. BUT, I checked Best Electronics Website today and THIS might be your problem - a notice to people trying to contact them via email. Could it be that you missed this notice?:

Electronic Mail:
Because of the big volume of Spam E-Mails we receive everyday, we had to install E-Mail Spam filters on our server.� When sending an E-Mail to Best, Please put the word "Atari", Atari item or Atari part number, Atari Question or Atari Sales inquiry in the Subject line.� E-Mails with the typical Spam subject matter like: Urgent, Must read, Regarding, FWD, Blank subject line (RE:) or other SPAM E-Mail Subject lines you receive, will be automatically deleted on our E-Mail Server and never reach us.
After sending your E-Mail to us, if you do not hear back from us within a day or less, please resend your E-Mail inquiry with a different Subject matter information or from a different E-Mail address.� We do 100% respond to every Atari E-Mail we receive.� But sometimes Spam Filters on your Internet provider server or your own personal E-Mail Spam software filter you have installed may delete our E-Mail back to you.

Hope this helps

Oh no! I hope they are just on Christmas vacation or something...

BTW Ben, here is my dictionary's definition of "irregardless":

irregardless |ˌiri'gärdlis|
adjective & adverb informal
regardless.
ORIGIN early 20th cent.: probably a blend of irrespective and regardless .
USAGE Irregardless, with its illogical negative prefix, is widely
heard, perhaps arising under the influence of such perfectly correct
forms as : irrespective. Irregardless is avoided by careful users of
English. Use regardless to mean 'without regard or consideration for'
or 'nevertheless': : I go walking every day regardless of season or
weather.

VINIRMA Consulting Pvt. Ltd. is a 360degree Human Resource Management Consulting and Staffing Services Organization with operations in UAE, Qatar, Bahrain, Australia, USA, Singapore & India.
VINIRMA Consulting is currently looking System Administrator (Distributed System) for one of our clients which is a leading Bank in Qatar with the following skill set and terms and conditions.
Education/Experience Requirements:
- Bachelor=92s Degree in Computer Science.
- Minimum 3 years experience in financial services with a specialization in systems technical design, implementation and maintenance of main server systems relevant to the environment (Main frames, AS/400, Equation, Misys Applications, etc.).
- Training courses and certification in operating systems, security and applications support.

Responsibilities

A. Shareholder & Financial:
- Perform necessary system administration to support Distributed Systems operations and further the Group=92s strategy.

B. Customer (Internal & External):
- Maintain relations with selected vendors for systems software, application, and hardware delivery and maintenance.
- Build and maintain strong and effective relationship with all other related departments and units to achieve the Group=92s goals/ objectives.
- Provide timely and accurate information to the external and internal auditors and the Compliance function as and when required.

C. Internal (Processes, Products, Regulatory):
- Install, monitor and maintain the main servers systems and applications for Distributed Systems.
- Provide a reliable operating systems environment in order that the applications meet the required service levels.
- Prepare documentation for specific platforms=92 procedures and guidelines for business continuity and contingency planning of the Group=92s systems architecture within the overall contingency planning policy of the Group; and check daily outcomes.
- Prepare documentation for specific platforms=92 procedures and guidelines for data and systems security of the Group=92s main systems within the overall systems security policy of the Group; and check daily logs and exceptions.
- Monitor assigned main systems operating systems and application performance sizing and utilization.
- Provide automated and documented procedures in order to support simplification of data center operations activity for daily procedures and synchronization of backup site.

- Provide automated and documented scripts for backup and retention of data on external storage within the backup and retention policy of each main system.
- Execute change management procedures with version and backtrack control
- Ensure timely resolution of operating systems and application failures on main systems.
- Report to the Head of Distributed Systems for approvals of work and prioritization of projects on hand.
- Confer with and seek guidance from the Senior System Administrator (Distributed System) in handling more complex jobs.

D. Learning & Knowledge:

- Possess in depth technical knowledge in operating systems of assigned main servers to provide a convenient platform for systems delivery, understanding the network and systems architecture to resolve any business disruption or inconvenience to the users that may critically impact the Group.
- Understand assigned systems=92 internals, architecture and limitations in deciding on methods of problem solving which may impact overall resource availability and time to deliver changes. Perform careful analysis to ensure congruence with the Group=92s long term planning and approved strategy.
- Be aware of systems security in application and system software to implement and monitor policy and ensure full protection of software and data from un-authorized access or disruption of services.
- Identify areas for professional development of self and act to enhance professional development.

Domain : Bank
Terms and conditions:
Joining time frame: 2 weeks (maximum 4 weeks)
The selected candidates shall be a direct employee of one of the leading banks in Qatar.
Should you be interested in this opportunity, please send your latest resume in MS Word format at the earliest at ambili.krishnan@vamsystems.com or call us +91-476 2681150.

Hi,

I made the POV test on a CT60 that runs slower than on an Hades or Milan !!

They share the same processor (68060) but the CT60 is clocked at 95MHz, much faster than the 60MHz Hades or 50MHz Milan.

What happens? Is there a library to load for faster FPU operations?

Here are the results of the POV test (in the middle of the page):

http://gtello.pagesperso-orange.fr/kronos_soft.htm

Can anyone help?

Guillaume.

Jozsi sent me his results for a 80MHz CT60 and he gets 16 seconds for
his POV test with the Radeon etc..

How can my machine (95MHz) spend 86 seconds on the same problem?

That's a mystery for now...

Guillaume.

The FPU-emulator is already installed by the CT60 firmware. Perhaps you
need to check your CT60-settings?

Something strange....

I renamed POV3.TTP to POV3.GTP and now it runs the test in 26 seconds instead of 86....

Looks like the TTP managment takes some time..!!

Guillaume.

Excepted for MagiC you not need program inside the AUTO folder for the
CT60. FPU 68881/2 emulation and unimplemented instuctions are added to
the TOS by the BOOT.

Inside the CT60CONF.CPX, boot / TOS, there are a popup with 4 choices of
setting for TOS Pexec and a cache 5 sec delais who disable caches when
the program start.

Didier.

Hi all

inspired from this case mode (http://www.mini-itx.com/projects/atari800/
) i'd like to build my small barebone (http://www.ixtenso.com/portal/de/product/
2851
) into a Mega STe or TT Case. Does anyone has one to offer for a
small cash?

I'll take the postage to.

Thx
Bernd

Hi
Maybe they are busy... I ended up calling them but they guy told me
that my account was put on hold until the end of January because of
asking too many quotes. So I was like... what the hell... I'm not
buying from them anymore, so I told them to delete my account... I'm
doing fine without them. I had purchased stuff from him before, but he
claimed that the guys in the warehouse were complaining because of the
"excessive" amount of orders. I think only one guy works there... So
anyways... I can say that when they sent the stuff, they sent the
right things... but he was always so Prima donna ...

So who knows, if you are still in the same boat. I would recommend you
calling him... I'm sure you are not banned.
thanks

Hello everyone,

It is Christmas day and I just wanted to wish everyone here
a Merry Christmas and a Happy New Year. Hard to believe it is
30 years ago I became an Atarian and I have never regretted
it. Take care all.....

Falcon030 with 16meg of ram

Bonnes f�tes!!!!!! Joyeux Noel!!
Best wishes from France to everyone.
I became an Atarian 24 years ago...
But I remember having played "Pong" in Spain in 75 ou 76. At this time it surely was an Atari machine even if I can't remember (I was 10 years old...).

Guillaume.

Hello,

I think I lost one message, someone wrote to me that colors are not
correct in 16bits with M_Player on his machine. I can't remember who!!
But I remerber that it was an Hades or a Milan computer.

Can you mail me again?
I think I fixed up the bug.
I tested it with succes on FalconCT60, NOVA 15 and 16 bits and MagicMAC
16 bits.

If some of you own a Milan/Hades and would like to test in 16 bits (and
if you can in 24/32 bits and 256 colors to verify that I didn't touch
anything), the beta version can be found at the bottom of this page:

http://gtello.pagesperso-orange.fr/mplayere.htm

Thanks,

Guillaume.

Hi,

In facts, only the following WEB sites are still missing for now

<http://www.sak.nu/> SAK - Svenska Atariklubben - www.sak.nu
<http://infodecalee.monforum.net/> Informatik D=E9cal=E9e (Forum)
<http://doyeuxyvan.free.fr/> Yvan Doyeux

May we have news from their maintainers ?

Best regards,

Hi,

I patched ASSEMBLE (Brainstorm's assembler) to get it to run on the CT60.
There were two problems:
```

1) crash when assembling top file from the editor without the 5s options of the CT60.
2) bad information dialog box with "Informations..." menu entry.

1) On my version, you don't get the crash anymore (I flush the caches just after the PEXEC(3), for that I had to take some place in the error messages to put my own instructions, the message "Obsolote preferences file" doesn"t exist anymore).

2) I have disabled the Informations meny entry, so you can't clic it anymore.

Fell free to ask for this patched version if you use ASSEMBLE...

Guillaume.

The official webpage of the swedish users association (Svenska Atariklubben, SAK), has temporarily gone off line due to a domain host issue.

We're working on a solution for this, and expect the webpage to be online again within a few days.

Sorry about this.

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

```

Happy New Year to all Atarian.... May the new year bring plenty of
Atari hardware & software upgrades to you.

My dad told me that I spend over an hour at a shop selling Atari 8
bits.... when I was 10 years old.
But my very own Atari ST was 23 years ago, and it is still running
when I tried in back in Nov 2010 !!

Rgds

I have found a version PD60.PRG that runs ont the CT60 but with problems, the redraw is not correct. So the informations displayed are not up to date when I trace a program. I have to reopen the CPU window and then clic on the other windows to get them updated.
Strange..

Guillaume.

Really? You found one that work on CT60?
Can you tell me where to find it?
I have been looking for one for over two years without any success.

Thanks!!

     On the Medusa Systems page, download HADESSH.ZIP and you'll find PD60
if the UTILITY/DEBUGGER folder.

     http://www.medusacomputer.com/thes-download.html

     Guillaume.

Thanks !!  :-) :-)
I will look there.
I didn't look there as I have no Hades.
Guess, i should not leave any stone unturned.

may be more files than stone :-)
If the Maya used files to make their calendar, they will not run out
of 2012 stones.

I tried the PD60.PRG and it works.
I was able to step through a simple test program.
The variables seems to change on my system as I step through the
program.
The program is just like a for loop to see the number changing... so
may be it is small so it works.

Also I have to revert to Videl mode with VI to give a bigger screen.
I used VDI copy mode as otherwise the user screen will crash the
program.

It does not like the radeon at all. Using radeon, the screen is black
but flashes of the windows can be seen.
The output to the user screen was OK, I had a form_alert and it came
out OK.
It seems that if I have overlapping windows on the debugger screen,
the window will be displayed but the positioning are all wrong.

Any way, thanks for pointing out the file. It works on Videl and it is
really much better than not having a debugger.

:-)) But are stones-files compatible with each other?

The fact is that I didn't try it on the Videl!

> It does not like the radeon at all. Using radeon, the screen is black
> but flashes of the windows can be seen.

I put "Memcopy" as video setting.
I can see the windows but the page displayed is not updated. When I

trace a program I can see for a short while the pointer advancing but then, the old screen comes back. So a buffer with the correct image is really up to date but it's not the one that remains displayed. To get it, I use Ctrl+C to activate the CPU window and then I click on every other window to update it.

Rodolphe Czuba sent me sources for a debugger expected to run on his first project Phenix 060. The work is not finished and I'm not sure to understand everything in it. The source is written in a way that I'm not used to: library, modules, etc... I always program with a single file (M_Player is a single file source with 600kb of text but... compiled in 10 seconds on the TT).

Well... The name of this project was Centinel. It appears that it has interesting options like being able to be run from the AUTO folder and install itself in memory. Very useful for drivers etc...

Guillaume.

Hi,

I added some things on my page, more photos and some links.
Then I will talk about the performances. The TT, even accelerated, is far behind (for example when reading an MPEG/DVD file).

http://gtello.pagesperso-orange.fr/falcon_e.htm

Thanks for this.
I tried the CPU window. It's almost the same as the overlapping window
trick.
But the Videl mode works better so I will use the Videl mode.

I have not heard of this as well.

Nice one.
Looks like my setup with the PSU on one side & CTPCI on the other.
My storage in the middle is my SD adapter.

I was thinking about an SD or CF card instead of the hard disk to reduce the noise.

Can you confirm that a IDE-CF adapter will work as a hard drive with nothing else to do on the Falcon?

Are there performance differences between a CF and a HDD ?

Guillaume.

Hello!

BITS have created their
first demostration only for
high resolution, monochrome:

BITS0058 "Coffee".

With lots of sines and
waves effects,
giant scroll line,
beautiful icons,
YM-2149 music.

100% 68000 assembler.

Download:
http://thebitsclub.tripod.com/demo/BITS0058-ST-20110104.ZIP

Good Night,
by BITS
(thebitsclub.tripod.com)

I replaced the 40GB 2.5" hard drive for a 4GB CF in my Falcon and it is
working perfectly well with a low cost IDE-CF adapter (a couple of euros).

> Are there performance differences between a CF and a HDD ?

For me, not with the HDD it replaces, but that one was probably not that
fast. You can see the performance of my CF card with the Kronos file I've
sent you a few weeks ago.

     Okay!
     And are there tools on the PC to read/write to the CF?

     Yes, I got it! Your CF is far better than my old IDE HD.
     So, that's a good point.
     Are there different CF cards? With better speed than others?

     Guillaume.

Well, I would suppose that if there are on the Atari, there must be on PCs
:-) But I haven't tried to read the card on another computer.

I think there are, but you'll find better answers here:

Is there any chance you could make a binary diff to allow free
distribution of this patch?

Why not, but I must be sure that the version I have is the common one!
I put my patched version for downlaod on my site assuming that it's not a commercial software anymore and that I only give the editor (not the assembler, nor the linker).

At then end of this page:

Hi,

I patched Gemview 3.18 to make it run on the CT60 without the
5sec/Copyback option.
as this program works with modules, caches are not updated when they are
laoded, so executing them leads to an error.

I sent a mail to Dieter Fiebelkorn to know how to diffuse this patch
because the program remains shareware on his site.

(Why Gemview? Why do I stil use it instead of Zview or Vision? Because
it's the only one that displays correctly the RLE encoded TGA that I use
with M_Player.
Zview: doesn't manage the packed pixels when they override a line (that
is allowed by the TGA definition)
Vision: doesn't support the RLE compressed TGA!

Well...

Guillaume.

Hello,

Here is a new page about the Powerbook 520c.
I tried MagicMAC on it, you can see photos, snapshots, etc...

http://gtello.pagesperso-orange.fr/pb520c_e.htm

Guillaume.

I'd say this is the video RAM.

>"frequency/x2/x4 (343S1108), so the processor gets its 50/25MHz."

No 50 MHz. The 040 doesn't use clock doubling for executing units.

>"Sure, on the TT, the MC68882 helps a lot! "

Sure? Really sure? To my knowledge a 68LC040 even when using FPU emulation is roughly as fast as a 68882.

>"Replace the 68LC040 with a full 68040 to get the FPU instructions."

a) It is really hard to replace a SMD mounted CPU like the 68LC040 without damaging the logic board.
b) Which Atari programs besides benchmark and mandelbrot programs gain a recognizable speed bump from a FPU? I know only a few like POVRAY. I'd say that a hint would be nice, that a FPU is not needed for ~90% of all Atari programs.

Regards

G�tz

For the OpenGL test, I think the TT48MHz + 68882 is faster than a 68LC040 25MHz. (as the FPU is clocked at 48MHz on the TT+CaTTamaran).

That's what I think too...

Sure, you're right, very few programs actually use the FPU. But... who knows...!

Do you have data for this? Higher FPU clock speed doesn't necessarily mean it's faster.

****************First test, arithmetic******************

Sure I have made some tests, the first one is arithmetic (+,-,/,*,sqrt), I have compiled it with Pure C with 68020 option and, of course, I don't use the FPU!!!
(source at the end of the mail named TESTREAL)

Arithmetic test (duration in seconds, 32000 iterations):

```
TT 68030 32MHz            9,39
TT 68030 48MHz          8,12
MagicMAC 68LC040 25MHz  5,01
```

This is to be compared with the FPU use made in assembler:
(Source at the end of the mail named FPU_TEST in Forth+Assembler)

TT + 68882 32 MHz	0,44
TT + 68882 48 MHz	0,40

Yeepa!!!

So, sure the 68040 is really faster than a 68030, even with a lower clock it overpasses the 68030! But, it can't compare with the power of a FPU unit.

***************Second test, scientific functions**********

The second one uses cosins, exponential, etc...
(Source at the end of the mail named TESTRL2)

Scientific test (duration in seconds, 5000 iterations):

TT 68030 32MHz	15,52
TT 68030 48MHz	13,30
MagicMAC 68LC040 25MHz	8,13

This is to be compared with the FPU use made in assembler:
(Source at the end of the mail named FPU_TEST in Forth+Assembler)

TT + 68882 32 MHz	0,40
TT + 68882 48 MHz	0,27

The same, no comparison... the FPU is really a great thing!

Guillaume.

***********TESTREAL*********
With 32000 iterations, results should be close to:
-1 670 603 994,438.... and 396,061 ...

```
#include "fcntl.h"
#include "stdio.h"
#include "math.h"

main()
{
     int i,top;
     double a,x;
     unsigned char c;
     printf("\nNombre d'iterations:");
     scanf("%d",&top);
     a=10.0;
     x=1.0;
     for (i=0;i<top;i++)
     {
          a+=x;
          a/=x;
          a-=x;
          a*=x;
          x+=0.0123456789;
          a+=sqrt(x);
     }
     printf("\nResultat:%f %f",a,x);
     c=getch();
}

*************TESTRL2*************
with 5000 iterations, results should be
11 549,666.... and 62,728 ....

#include "fcntl.h"
#include "stdio.h"
#include "math.h"

main()
{
     int i,top;
     double a,x;
     unsigned char c;
     printf("\nNombre d'iterations:");
     scanf("%d",&top);
     a=10.0;
     x=1.0;
     for (i=0;i<top;i++)
     {
          a+=cos(x)+sin(x)+tan(x)+log(x)+exp(-x);
          x+=0.0123456789;
     }
     printf("\nResultat:%f %f",a,x);
     c=getch();
}

Hi,

a new version of my video player for STE (2.91) is available.
Now, if the sound doesn't fit into memory, the program tries to lower
the sound quality (stereo->mono, or frequency division) to play it. You
can now view larger animations.

When converting a PC movie AVI/MOV to Atari FLM, a new dialog box
appears allowing you to select the image rate you want from the original
(from 1/8 to 8/8) and if you want to reduce sound.

This helps you adapt your FLM to your own configuration regarding the
speed of your disk, the speed of your processor (8/16MHz), and your RAM.

Everything on this page:
http://gtello.pagesperso-orange.fr/mpste_e.htm

And, particularly, the new features:
http://gtello.pagesperso-orange.fr/mpste_e.htm#flmopt

You may know "GOODTIME.AVI" a musical clip that could be found on the
Windows95 CD ROM some years ago. I could convert is succesfully to FLM
with a good synchro.

Guillaume.

Hello,

I release the Version 5.5 from the database program Phoenix.

There is now an english version from the RSCs and the documentation. Thanks to Peter A. West.

There is also italian version from the RSCs. Thanks to Mauro Brollo and Lodovico Zanier.

Also a thanks to Sascha Uhlig for the new icons.

I make only some minor changes:
The Desginer will not crash if no printer is installed and the dialog "Table info" looks better.
The Manager works better with SpeedoGDOS, but this s not tested very well.

Gerhard

The designer have a bug. He have problems we he wants to save the
"designer.inf" at the end of the program.

The archive on the homepage is uptodate.

I wiped the dust off a small utility called Explode! that I
once shipped with XaAES.

It interacts with the desktop via the AV server.

You can find it on my homepage (see sig)

--------------040401030603000608020306
Content-Type: text/plain; x-mac-type="0"; x-mac-creator="0";
 name="EXPLODE.TXT"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline;
 filename="EXPLODE.TXT"

Welcome to Explode!

Explode is a small directory tree view utility for the Atari ST series
desktop computers and its offspring.

It can be used as a prg on multitasking environments or as a
accessory on single TOS. For use as a accessory, change suffix to ACC
and put the program in your boot drive. Then reboot.

On single TOS starting programs may not work, but I tested with Teradesk
and opening directories and files for the viewer worked.

Explode tries to locate a AV server which would mostly be a desktop

program. When a AV server is net yet loaded, Explode tries 5 times
with a 1 second interval. When a AV server can not be found,
Explode displays a alert box in which you can choose between
Quit, Retry or Without.
Without AV server Explode is still a usefull directory display routine.

If the environment variable AVSERVER is absent, Explode first tries to find DESKOP, then tries to find MAGXDESK.

A nice aspect of Explode is that it always keeps its window as small as possible exposing as much precious screen area as possible without special action.

Explode defaults its window position to the lower left corner of the sreen until the user has moved the window. This new position will be used as the return position from then on.

Explode understands the AP_TERM message.

Mouse usage

left click:		explode or callapse directory.
right click:	Directory:	Send AV_OPENWIND to AV server. Teradesk opens a directory window.
	File:	Send AV_STARPROG to AV server. Teradesk performs expected action on the file based based on its type or extension.
Drag and drop:		Depends totally on the AV server implementation and the receiver of the drop. Drag on a window or the desktop background sends AV_DRAG_ON_WINDOW to the server if there is one. All other cases a standard DRAG&DROP protocoll is started. I discovered that Teradesk converts a AV_DRAG_ON_WINDOW message to a DRAG&DROP protocoll if a drop is on a window not owned by Teradesk. Which is nice :-)

Keyboard usage

Ctrl+Q, Ctrl+U	Program: Quit Accessory: Collapse all and close window.
ESC	Collapse all.
Cursor right	Explode directory and go to first sibling.
Curser left	Collapse directory.
Cursor down	Go to next line. With only 3 fingers you can go quickly through all the drives and directories of your system.
Cursor up	Go to prvious line.
Shift + cursor right	Go to next of parent directory.
Shift + cursor left	Go to parent directory.

Shift cursor down	Go half a page down.
Shift cursor up	Go half a page up.
INS, UNDO	explode or callapse directory.

Explode comes in 2 flavours:

explode.acc	a 68000 version
explode.prg	a Coldfire/68020 version

You can choose the processor version you need, move it to its destination and then change its suffix to the one you need.

Have fun!

Henk Robbers

Hello all,

There is a new demo video of the Atari Coldfire board
on the Coldfire website. It is not very long, but it
a nice one. Give it a look see. Boots realy fast. It
should be coming out soon hopefully.

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	47	AMD64
aranym-0.9.10.linux.ix86.rpm	54	ix86
aranym_0.9.10.linux.amd64.deb	36	AMD64
aranym_0.9.10.linux.i386.deb	74	i386
aranym-0.9.10-cygwin.zip	504	i386
aranym-0.9.10-macosx.dmg	238	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	600	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (211), Windows (504), Macintosh (238) =3D total 1553.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Did you try it?
There are a few typos in the readme.
The program should be OK.

 No AV server found ][Quit|Retry|Without]�)
-------------------------------cut-------------------------------
```

The environment variable is: AVSERVER=JINNEE

When I change this

```
-------------------------------cut-------------------------------
env = getenv("AVSERVER");
```

```
if (env)
/* [GS] Start */
{
    int i;
    char ZStr[10];

    strcpy (ZStr, env );
    i= (int) strlen (ZStr);
    if ( i < 8 )
    {
        do
        {
            ZStr[i++] = ' ';
        }while (i < 8 );
        ZStr[i] = '\0';
    }
    av_id = appl_find(ZStr);
}
/* End; old:
    av_id = appl_find(env);
*/
else
{
-------------------------------cut------------------------------
```

Then find Explode the AV server.

Gerhard

LS

A note to all users of AHCC.

AHCC implements the C99 _Bool type.
the identifiers false and true represent builtin truth values.

```
false coerces to zero when assigned to int.
true  coerces to one  when assigned to int.
```

AHCC implicitely defines the macro __bool_true_false_are_defined 1 advice:

```
#if __bool_true_false_are_defined
typedef _Bool bool, boolean;
#else
....
/* all private declarations of bool, boolean, true and false */
...
#endif
```

FYI

Hi,

You may all have heard about me on c.s.a.st and know the
Eureka 2.12 shareware that I've written for all ATARI machines.

At the same period I was writing Eureka 2.12 on ATARI, another
similar software "Graphing Calculator" was developed on Macintosh.
The amazing story of the Macintosh software really impressed me.

I strongly recommend the reading of the following article to
understand the hazardous ways of the software developments.

<http://www.pacifict.com/Story/>

ATARIstically yours =3D)

Oops, sorry. The video is not on the Coldfire website,
but it is on You-tube Just do a search using "Firebee".
I asked them to do a longer demo with much more of the
features being shown. I made some suggestions and \
hopefully they will do it.

I have uploaded a new version.
The last one crashed miserably when using the right button.

(The punishment for doing things in a hurry)

This is GEMDict version 0.2

GEMDict is a graphical client for the DICT protocol, which allows querying online dictionaries and retrieving definitions.

You can download it here: http://gemdict.org/download

Release Notes:

Requirements:
- MiNTnet
- Modern AES (min. version 4.1; only tested with XaAES)
- NVDI

New Features/Corrections:
- Sending of extended characters allowed (commands are proper UTF-8 sequences now, as per the DICT RFC). This makes the translation dictionnaries much more useful.
- Extended characters can be added to the search field from a character box called with the Insert key (as with the Thing desktop).
- Automatic connection/deconnection from the server. No need anymore to quit the program after the server has closed the connection.
- 256 colour selection implemented in the colour selector.
- Fixed an awful amount of issues relating to the handling of the AV protocol. Everything works now (global window cycling, directory window updates, etc.) with some exceptions when the server is Teradesk (see Known Issues below).
- Complete German version, including help guide and help bubble. This is the work of Lars schmidbauer.
- English help guide completed, again the work of Lars.
- As a consequence of the above, the appropriate resource file and help guide are loaded according to the language of the system.

```
Limitations:
  - Display of extended characters only possible with the system font.
  - "match" mode still barely useful.

Known Issues:
  - Alt+letter keyboard shortcuts not always working in the configuration
    dialog.
  - The items in the Help menu do not work when Teradesk is the AV server.

Installation:
  - None to speak of, apart from the "gemdict*.hyp" and "gemdict*.ref" files
    that must go into the GUIDES folder.

It looks now like a Geocities-Site: overlapping content, nearly
unreadable, animated GIFs, bad contrast. Sorry to say, but it looks
horrible. Or is it ironic and I don't get it?

Regards
G�tz

Irony is that site contains plethora of useful information.

Zoli, you should definitely redo it from scratch, even frame-based
version would be better than this. Also every-month-changing domain
address isn't very user friendly.

  Oh, sorry - I did not test it on badly set MS Internet Explorer.
Anyone still uses that crap ?  :-)

 Anyway, I changed some things, so no more overlap should happen.
Animated GIFs stay :-)
 Bad contrast was not there - really don't know on what crap you
```

browsing ? :-)
 Do you talk about index page or generally ? What page has bad
contrast ?

 Every month changing domain ? Folks, you really talk like spoiled
childs.
 I was forced to start new site in April, when 07x.net suddenly
deleted all free hosted sites.
 From that days content is on petari.000space.com . This
8bitchip.info for now goes parallel. And it is paid site. So, site
change was last time in April ... Really demotivating reading posts
like yours. With such attitude no wonder that Atari community is every
day smaller. I mean, some critic is welcome, but not like you do -
exaggering .

That overlapping is intentional. Icon and text partially over it
links to same page.

I talked by overlapping Site news division by AdSense in case of MS

Internet Explorer - and I saw it only on one machine in public library, not on mine.

I really don't get what some people has against little unusual design, against animated GIFs ?
What I dislike is some rigid format, like 'military' ordered icons .

P.S. whole site content is 'overlapping' in some way. Many pages contain partially same data as other one(s) :-)

The design of your site is what you want it to be!
No need to argue about that.
I use IE8 and it is clear and readable.

Talking about the contents: I found your site very interesting, I didn't know that some Atarians were still so productive on hardware. Do you plan to publish your work and not more, or to produce the items you are describing?

The section about game adaptation to run from HD is great too.

Guillaume/

Hi,

I just released v0.8 of my terminal emulator for FreeMiNT/XaAES. It's still not a full-blown replacement to TosWin, but provided that I didn't make any fatal bugs I think it's ready for everyday use :)

v0.8 introduces tons of changes, too many to list here.

Some notable changes are:
- fullscreen mode available on any hardware
- multiple windows
- umlauts and graphical characters work better now
- improved speed

```
- paste (not copy however, it's too boring to implement)
- VIDEL fullscreen mode is now configurable using Screens of Pain

As usual, you find it at xaaes.atari.org.

best regards

  It looks that I like to argue :-) Especially when people talking not
true things :-)
  Redesigned it again - now centered.

  Most of projects there is for DIY enthusiasts.
 Only CATA - cartridge port IDE adapter is planned for production and
sale.

> =A0 =A0 =A0 =A0 The section about game adaptation to run from HD is great=
 too.
>

  I working on some new things/solutions for it - but it goes slowly.
Some 'new' games are in plan too.

>

> speed test doesn't work for me).

  Correct, but that version is obsolete. Never versions contain all
tests.
 Best to use GUI version :  'New Speed Test PRG'  -  accessible via
green
menu bar at top of most pages.   http://atari.8bitchip.info/ahpt.html

Tested yesterday with CAB 2.8 & HighWire on FalCT60 96/25 MHz.
Displays fine on both browsers, though sometimes a page refuses to
display, but it will a few minutes later.
Very nice work.

Regards,

J.-Luc

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	59	AMD64
aranym-0.9.10.linux.ix86.rpm	63	ix86
aranym_0.9.10.linux.amd64.deb	37	AMD64
aranym_0.9.10.linux.i386.deb	100	i386
aranym-0.9.10-cygwin.zip	661	i386
aranym-0.9.10-macosx.dmg	329	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	779	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (259), Windows (661), Macintosh (329) =3D total 2028.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Any one out there. I was in the Local scene in the 8-bit and 16 bit
back in the late 80's and mid 90's.
I was know as Bone or Boner. Went to Buckskin BBS, Gateway BBS, Frog
and a few others.
Always happy to hear what happened to my few Atarians.

Hi,

Have you heard of Video Game Live ? <http://www.videogameslive.com/>

<http://www.youtube.com/watch?v=3D_1hA7Gj3lg8Video>

Classical themes of video games are played with a symphonic orchestra.
This includes the first of all, of course, with Pong Game Live :-)

If you don't went to the live spectacle, there's CD / DVD / Blu-ray.

Great !

ATARIstically yours =3D)

LS

There is a new version available on my homepage (see sig)

Changes:

```
    Compiler:
       Further fixes for, and completion of Coldfire target.

       Fixed a rare crash when compiling nnn.c when AHCC also
       had open in a window a file nnn.s from the same folder.
       It happened to me while I was rewriting nkcc.s into nkcc.c
       :-)

       Cdecl functions returning a pointer do so in both a0 and d0.

    Assembler:
       Accept ENDR after REPEAT.
       Fix a memory leak in the 'ascii' opcode.

    Library:
       Set both variables _envp and __EnvStrPtr in ahcstart.c
       Replaced getenv (gcc version) by getenv from dlibs.
       Repaired enum HOURGLAS,BUSYBEE in sinclude\np_aes.h & aes.h
       Removed a few leftover debugging printf's from AHCM

    Shell:
       Find multiple, Find in project:
          Fixed line number counting for files with unix line endings.

    Editor:
       Window menu 'leave' behaviour changed. The menu is no longer
       popped when left via the bottom of the menu.
```

Hello.

I would like to know how the Falcon TOS 4.04 choses between 50 and 60 Hz
resolutions on RGB monitors. For example, if I switch to the ST-Low
resolution from the desktop, will it switch to 50 or 60 Hz mode ?

On ST TOS, the PAL/NTSC flag was hardcoded into the OS header in each
national TOS. But if I'm not wrong, there is only one international version
of Falcon TOS 4.04.
So on Falcon, does the PAL/NTSC settings come from the country code stored
in the NVRAM ?
What happens if the NVRAM is not initialized, it could lead to wrong
frequency and unusable display, then the user will be unable to switch to
the right mode...

And final question, do the PAL/NTSC settings have some importance on VGA
monitors ?

Thanks in advance.

Correct.

Yup.

I'd doubt it as the

The videl chip in the Falcon is completely programmable, its possible to have all sorts of odd permutations. The defaults are set by the NVRAM settings. If its set to UK or EU then it will default to 50hz or 60hz for US.

Mark

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	62	AMD64
aranym-0.9.10.linux.ix86.rpm	69	ix86
aranym_0.9.10.linux.amd64.deb	37	AMD64
aranym_0.9.10.linux.i386.deb	126	i386
aranym-0.9.10-cygwin.zip	760	i386
aranym-0.9.10-macosx.dmg	382	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	830	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (294), Windows (760), Macintosh (382) =3D total 2266.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Interesting - my provider changed some servers with "no differences for
your account". Seems they messed up redirecting stuffs :(

In the mean time I tried to fix it by placing a dummy index.html inside
which will automatically load the real index.shtml.

Alternatively add /index.shtml to the URL.

cheers,
Matthias

```

>in the NVRAM ?

Yes, I think that's the case. The NVCONFIG.CPX has a checkbox for
'PAL mode'. I presume that if that's not crossed the output will
be 60 Hz RGB.

>What happens if the NVRAM is not initialized, it could lead to wrong
>frequency and unusable display, then the user will be unable to switch to
>the right mode...

Most modern monitors will give a readable display on either 50 or
60 Hz.

>And final question, do the PAL/NTSC settings have some importance on VGA
>monitors ?

I don't think so.

Regards, /Peter/

Bad answer. We are still here, still using Atari's, still supporting Atari's, still seeing new software and hardware releases for Atari, in fact, still loving Atari.   :)

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

99% of hardware and software for the ATARI ST have been designed by
men. That proves that women are too stupid for making anything for the
ATARI ST computers and that they should not work with computers!

Women should stay at home and they should care for the kids and wash,
clean and cook for their husbands. Men were made for operating
computers, for coding, for working and for earning money.

Feminism is evil, we HAVE TO turn back time and we have to take it
back. Women MUST NOT make careers, they have to be mothers and
homemakers.

Come to alt.misogyny to talk about how evil feminism has made women
and what we men can do to destroy that evil and to bring back the
lovely housewives of the past.

Tony Simsig

I was on some of those. Frog was my favorite. I was (and still am)
Starsabre.

I fondly recall Instant Replay in west county and I think it was called
Back to Basics up in north county.

Globetech is a Ireland based Parking software development firm, Which specializes in Parking Enforcement and Software

GlobeTech=92s years of experience in providing civil enforcement solutions have resulted in an invaluable insight when it comes to every aspect of parking management.

This expertise, combined with our unique customer focus, means GlobeTech could be the flexible market leading solution you are looking for.

The implementation of any solution within a Local Authority must take account of legislative, financial and policy considerations. We understand that success requires a product that delivers a high level of service to all those departments involved in civil enforcement.

Our understanding gives us an appreciation of the variety of demands imposed by these different departments. Therefore we have developed flexible products that offer complete end-to-end solutions..

LS

There is a new version available on my homepage (see sig).

Changes:

```
may 27 2010
v4
    Editor:
       Better placement of windows with tiling.

    Compiler:
       Finished 68020 compatible Coldfire target. (C only)
       Long mod (%) done by hardware for 68020+ and Coldfire.
       Fixed a bug in AHCCST concerning assigning a variable
           to a bit field.
       Forbid duplication of enum identifiers.

    Linker:
       'nm' list: addresses always in hex.

    Library:
       Fixed binding for vsl_ends; Some VDI's acces intout.
       Changed binding for v_gtext; Intin array static.
       Replies and setting of errno same as Pure C lib.

--
```

Groeten; Regards.
Henk Robbers. http://members.chello.nl/h.robbers
Interactive disassembler: TT-Digger; http://digger.atari.org
A Home Cooked C compiler: AHCC; http://ahcc.atari.org

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	379	AMD64
aranym-0.9.9.linux.ix86.rpm	555	ix86
aranym_0.9.9.linux.amd64.deb	95	AMD64
aranym_0.9.9.linux.i386.deb	226	i386
aranym-0.9.9-cygwin.zip	1686	i386
aranym-0.9.9-macosx.dmg	877	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	311	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1255), Windows (1686), Macintosh (877) =3D total 4129.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

LS

AHCCST.ZIP has been supplied with the wrong standard library.

I'll replace it ASAP.

In the mean time, users of AHCCST can replace ahccstd.lib
by ahccstdi.lib from AHCC.ZIP

Apologies for any inconvenience.

I haven't tried AHCC much before yesterday. I thougt I would have
a go at compiling Newsie.

I am missing a few headers/libs but I spotted the V4 update and
installed it. Now it cannot find a lot of headers.

It is probably me doing something stupid.

Peter

I'm trying to help a friend rehabilitate a long-stored Atari 1024ST (F). The kit includes a Berkeley Microsystems BMS-100 Hard Disk Interface, complete with a couple of defective MFM (ST506) disks. My plan was to ignore the Adaptec ACB-4000 card, and try it with an old (100MB) SCSI disk. Sadly, we haven't found the floppy with the software for the BMS-100. From the manual, I gather that it would include such things as BMSINIT.PRG, INITCLK.PRG, INSTALL.PRG, and SETCLK.PRG (and a sample BMSINIT.DAT, but I might be able to fake that).

So, is this stuff available anywhere these days? Google and I didn't find anything which looked helpful.

I never did much with one of these systems, and there doesn't seem to be much useful software in our collection. Are people still mailing floppies around, or is there some

simple way to get something from a computer with an Internet
connection onto one of these things? (Is there a Kermit or
something to use with the serial port? And how would I get
that loaded?)

Any pointers to useful info would be gratefully received.

Hi,

There's a 0.9.10 release of ARAnyM <http://aranym.org/>, so
the *miniPack* <http://eureka.atari.org/miniPack.zip> was
updated. It supports

`MacAranym` allows launching on Macintosh with Mac OS X
`MacAranym JIT` allows launching on IntelMac with Mac OS X
`run_x86.sh` allows launching on PC with x86-Linux
`run_ppc.sh` allows launching on Mac _and_ PS3 with PPC-Linux

So Macintosh - PC - PlayStation 3 are all supported with
both Mac OS X and GNU / Linux.

This simple ARAnyM configuration is entirely based on Unices.
Here is a screenshot <http://eureka.atari.org/aranym.gif>

Enjoy, it's yours =3D)

And I might find this where, exactly? (And the BMS-100 is among this "most"?)

I did receive a BMS-100 software kit from a kind group reader (files dated 21-NOV-1985), and I managed to transfer the files to a DOS/FAT floppy (DD) which the Atari system could read. Sadly, BMSINIT.PRG (et al.) seem to be happy only when the BMS card is connected to the Adaptec ACB-4000 card, and it, in turn, is connected to an ST506-compatible disk drive. (Otherwise, the DMA device selection list is all grayed-out.) My supply of MFM disk drives is quite limited (and that of working ones even mode so), so I was hoping to connect a small (<=1GB) SCSI drive directly to the BMS card, eliminating the Adaptec card, but I have not been able to make this work.

Any additional wisdom (or pointers to same) would be welcome.

Just for completeness there are some more modern drivers available,
HDDRIVER. Info here:-

http://www.seimet.de/atari/en/hddriveroverview.html

And cbhd, info here:-

http://www.clausbrod.de/cgi-bin/view.pl/Atari/CBHD

I have a licensed copy of HDDRIVER its very good and support is excellent,
but the demo won't format a disk.
When I last messed I seem to recall I used CBHD to partition and format the
drive but needed HDDRIVER to reliably access it. However I thin CBHD has
since been updated.

Did the drive you tried have a parity disable link? Did you disable parity
on the drive?
From what I remember some of the older software has a disk parameter file
that may need tweaking for real scsi drives.

Sorry to "spam" , on further searching I note Roger Burrows who produce some fine CD reader software mentions the BMS on his pages:-

http://www.anodynesoftware.com/e4/hardware.htm

So I assume the BMS can be used for normal SCSI CD's so I assume it works with SCSI disks. He used to drop in here, but it might be worth e-mailing hime to see if he has any info about specific setups.

It would be great to upload/publish them to the public so that everybody
else facing this problem in the future searching for a solution will
find not only "ha, I got it, thanks" but a download URL.

Regards
G�tz

Did you try http://icd.com  ?  i format my megafile 20 mfm and my
megafile 60 RLL and my internal 700meg scsi on my atari megaSTE.  i
have tried the same job but it only likes mfm drives.

I was there all weekend, I managed to spot a 7800 and an 800XL in use and an ST on a crowded shelf in the museum of computing. I heard of at least one person offering an Atari display but it wasn't taken up.

Next time, Gadget. Next time!

Hi,

Do you know the conference that gave Nolan Bushnell at Google ?

<http://www.youtube.com/user/GoogleTechTalks#p/search/0/Xj8wDFMbBPQ>

This was 2009 January 29th, and I wonder if there's more recent
video talks. Nolan Bushnell was nominated 2010 April 19th to the
ATARI (Infogrames) board. There must be some materials about him
around, since his nomination. Someone knows ? He was invited to
Humanity Plus <http://www.hplussummit.com/speakers.html> and it
must remain something from June talks. That's interesting ...

ATARIstically yours =3D)

Of course, but when I get it I will still have to build the system. Sorry it took me so long to answer, but I have been very busy this summer. Working a lot of extra days.

It should wrk. I had it work fine with STIK, now I am using STing. Make sure you are using the correct OVL file. They give a bunch of different ones to chose from. Read the docs to see which one to use.

Hi,

Here is statistics about ARAnyM 0.9.10 downloads, released 2010/06/06

Package	#	Architecture
aranym-0.9.10.linux.x86_64.rpm	29	AMD64
aranym-0.9.10.linux.ix86.rpm	36	ix86
aranym_0.9.10.linux.amd64.deb	14	AMD64
aranym_0.9.10.linux.i386.deb	31	i386
aranym-0.9.10-cygwin.zip	221	i386
aranym-0.9.10-macosx.dmg	81	Mac Universal (PPC/x86)
aranym-0.9.10.tar.gz	262	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.10/>

i.e. Linux (110), Windows (221), Macintosh (81) =3D total 674.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

```
<CENTER>
<form action=3D"http://www.google.com/cse" id=3D"cse-search-box">
   <div>
     <input type=3D"hidden" name=3D"cx"
value=3D"014753128619202207476:tzogojpdahi" />
     <input type=3D"text" name=3D"q" size=3D"25" />
     <input type=3D"submit" name=3D"sa" value=3D"Rechercher" />
   </div>
</form>
<script type=3D"text/javascript"
src=3D"http://www.google.com/coop/cse/brand?form=3Dcse-search-box&lang=3D=
fr"></script>
</CENTER>
```

Have a good ATARI WEB Surfing =3D)

Hello,

Anyone still using MagicMAC?
I'd like some advices for the installation, I have a Powerbook 520c with
a working floppy unit.
But how can I copy file from my PC?

Guillaume.

h=20
> a working floppy unit.

The PowerBook should have a SCSI squared connector on the back side.

> But how can I copy file from my PC?

There's a kind of SCSI cable, squared at one side, and 50 pin SCSI at
the other end. This cable should allow you to connect a SCSI Iomega
drive, that is also available with the parallel or USB port on the
PC. You can transfer all the stuff with a ZIP drive from Mac to PC.

I hope it helps,

Regards,

That's what I found: a 30pins to DB25 converter to use the ZIP.
Wainting for it, I found some useful programs as:
- TransMAC
- Stuffit.

And yet, I copied some old games on the MAC, but I'll have to use the ZIP to copy the MagicMAC emulator.

Can you precise how does it work for TOS files? Does it need a partition? Or just a folder?

Guillaume.

Well done !

>     Wainting for it, I found some useful programs as:
>     - TransMAC
>     - Stuffit.

The most useful for that is an extension called "PC Access" ...

>     And yet, I copied some old games on the MAC, but I'll have to use=20
> the ZIP to copy the MagicMAC emulator.
>=20
>     Can you precise how does it work for TOS files? Does it need a=20
> partition? Or just a folder?

With "PC Access", if the ZIP drive support is DOS formated, you
just have to copy any kind of PC or Mac files, from a system to
the other. Because TOS files are neither PC nor Mac formats, it
will be recognized without translation, on both PC and Mac, easy !

The main point is to copy files "ATARI as they are" on a FAT32
file system, that will be recognized with the two OSes. With
"PC Access" extension, the Macintosh is able to read DOS formated
ZIP. You should add the extension to the Finder. The DOS formated
ZIP is recognized under Windows. You have just to copy files, simply.

I hope it helps,

Regards,

I made a mistake, it does not need to be new. Just looking for a nice
clean falcon that was taken care of.

Thanks

Disable or remove the SLM-driver, if the problem persists then this is
not related to the printer. Does other apps (like Teradesk or
FontSelect) recognise the fonts?

Hello,

I had the chance to use both peripherials on my STE. So I made a little
comparison between them.
Performances are really different..!!

You can find the link in the middle of my page about the STE:

http://pagesperso-orange.fr/gtello/aste_e.htm

Guillaume.

A batch of CT63 is planned.
The second batch of CTPCI is planned.

Orders are open now.

CT63 (+ 060 rev.6) price is 320? + shipping
http://www.powerphenix.com/CT60/english/prices.htm

CT63 + CTPCI special offer : 420 ? instead of 490 ?
(Shipping same than for CT63 alone)

Estimated Delivery : june
(The fastest I get all responses, the fastest I know how much we produce and can order production).

Yes, US is much faster, about 5-6 in average. May do exact speed
tests with special program for that purpose:

Posted new hard disk image files - separated ones for cards/drives
from 256MB to 4GB.
Included some 196 hard disk runnable games - latest adapts mostly.
Usable on Satan (up to 2GB !), Ultrasatan, CF cards etc.

Here more details, DL links: http://ppera.07x.net/atari/DiskImgPP1.html

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package                                   #             Architecture

aranym-0.9.9.linux.x86_64.rpm           306                    AMD64
aranym-0.9.9.linux.ix86.rpm             499                     ix86
aranym_0.9.9.linux.amd64.deb             86                    AMD64
aranym_0.9.9.linux.i386.deb             200                     i386
aranym-0.9.9-cygwin.zip                1386                     i386
aranym-0.9.9-macosx.dmg                 742     Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz                     256        Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1091), Windows (1386), Macintosh (742) =3D total 3475.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

> They just removed Linux support from the PS3....

Ho yes. I know, because I just updated the 3.21 firmware on my PS3 Slim.
I'm wondering how many PlayStation 3 owners ran ARAnyM on their machine.

Anyway, we are looking forward to have an unofficial GNU / Linux hosted
with PlayStation 3. I'm deeply convinced that the Linux adventure will
not stop like that on the nextgen hardware. You know that GNU / Linux
started on the PC hardware with the hostility from the whole IT market.

Finally Apple that was so reluctant, completely adopted free software.
PS3 developers were totally stuck with Sony's NDA, but now it's clear.
It's just a point to know if the Cell CPU will spread or finish selling.

I imagine that next developers will not have to cope with hypervisor and
all the restrictive protections Sony took against system's developers.

Anyway, if the PPC code included in the *miniPack* is not useful for
PlayStation 3 owners, it can always run with PPC-Linux hosted boxes.
The PowerPC version, even if it's built on PS3, is binary compatible.

ATARIstically yours =3D)

Hello,

After 11 years of "pause", I worked a little on MP_STE, the 68000
version of M_Player.

Some functions were enabled with SHIFT or ALT from the main dialog, I
changed that and added some clearer buttons.

I explained how MP_STE works, and particularly the FLM conversion of

AVI/MOV files to view them with a better quality on a basic 8MHz STE. Everything is on this page:

http://pagesperso-orange.fr/gtello/mpste_e.htm

Guillaume.

Hi,

Did you noticed this video ?

<http://www.dailymotion.com/video/xcv6dv_pixels-by-patrick-jean_creation>=

It's an animation called "Pixels" that relates to retro-gaming.

It is _very_ spectacular.

Best regards,

Dear all,

It has been a while since the show. Well, the show photos (320 pictures) are online since November 2009 but in good old Sinclair manner it took longer than estimated to complete the aftershow-webpage. ;-) But it=92s ready now. Highlight of the recent QLvsJAGUAR website update is the QL-Mac-Show page which holds now all presentations of the various sessions in both Microsoft PowerPoint (PPT) and Adobe Acrobat (PDF) formats. In addition you can watch related videos on YouTube. URL is:
http://tinyurl.com/ql-mac-show

Don't forget the have a look at Linus Torvalds (the creator of the Linux kernel) GMOVE software blitter for the QL on the QL-is-25 webpage. URL is:
http://tinyurl.com/ql-is-25

In addition to the aftershow stuff I uploaded more pictures and videos of past QL shows to Windows Live Skydrive and YouTube.

If you're interested in more audio/visual QL resources you may try out one of these URLs:
http://tinyurl.com/ql-story
http://tinyurl.com/ql-pics
http://tinyurl.com/ql-videos

I=92m unable to attend the QUANTA Workshop & AGM 2010, Birmingham to be held on Sunday 18th April 2010 (http://www.quanta.org.uk/index.asp) but will join for the international QL-meeting 2010 in Prottes, Austria near Vienna in June (http://www.kuel.org/). I hope to see many of you there.

Best regards, Urs

Hello all, I was wondering if someone could point me in the right direction.I have, after alot fiddeling. finally got a cd drive installed. I used HDDRIVER. The drive appears at bootup and is given a drive letter, but I cant access any media. The icon can be highlighted but the mouse pointer dosn`t change after a double click. What have I done wrong or havn`t done.Any help would be appreciated. Cheers.

Do you have a CD-ROM driver installed? HDDRIVER alone is not sufficient
to read CDs.

You need a CD driver.
The common one, and free, is METADOS.
You can find it on the WEB, it requieres a little text file to be adapted to your own configuration. The default text file (CONFIG.SYS??) contains a lot of detailled explanations.
But... If you are using a STE, some DMA/SCSI interfaces don't work with CDs... I had two of them in the past.

Guillaume.

You would also need the software from Anodyne (Extendos Gold, Cd Backup, etc.) That is what I use and they all work great. With this software you can also hook up a DVD drive to your Atari.

Dear Joe B., I have my Mega ST4 with Internal Floppy Drive as well as 2 More external Indus GT Drives! One 3.5" and One 5.25" GT Drive! The Indus 5.25" GT Disk Drive was made for the 8 Bit Atari! I use it to Transfer 8 Bit SoftWare that I download off the Internet onto my Atari ST so I can Transfer Games and Such onto 5.25" Floppy Disks so I can Play on my Atari 800xl!Credit goes to a special Cable by Derek Mihocka that plugs into the ST's Printer Port! Mine is hooked upto an A/B Switch Box sharing with my HP LaserJet! I use ST XFormers Transfer Utilities and I can Transfer .XFD and .ATR (I think .ATR?) to 5.25"!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

> How many floppy disk drives does an Atari 520ST support?
>

Two, "A" and "B". The Original ST had no drives and used an external drive with a through socket. The Drive Select line is rotated to the next pin as the signals flow through the drive. This allows two drives to be cascaded..

Subject: wanted NVDI 4

I want and need a copy of NVDI 4. The reason is that NVDI 5 or 5.03 does not play nice with x-windows, or at least I have not found how to make it cooperate.

Jim

So I had this dream last night, in which I was setting up a business and the previous occupant of the premises was in the middle of clearing out some old stuff. All up the stairs there were piles of 3.5" floppy disks, and at the end of the balcony, on a table, was an old computer, labelled as an Atari ST 1500. It had a kind of steampunk look to it, lots of metal and rivets as well as faded, discoloured plastic, and there was a slot on the side for a wireless trackball device to slot into.

Crazy, huh?

Hello,

We have good news :

- no more freezing on DMA PLX accesses with a modification of the ABE arbiter (please update).

- A small correction on CTPCI for TA (transfer Acknowledge = end of cycle 060) : should remove some 'address fault' on boot you may experienced and may increase staibility at high speed (above 90 MHz).

With these 2 updates, I ran at 95 MHz during several hours with PLX DMA ON without any crash.
- Anyplayer runs in 256 & 65K with MP3 & MOV playing. No Falcon SDMA , 060 & PLX DMA conflict ! Everybody is running together...
- The desktop icons are here and correct in 65K mode with DMA PLX transfers (this confirm that PLX DMA is OK) ! No correct icons in 256 colors modes...I think it is a software problem here.
- Kronos 1.91 runs with DMA ON and all tests are ok. Sure there are some redraw problems like in the desktop... and it is crashing in 65K at start of OPEN GL test (no problem without DMA).
  Note in 256 colors modes with OPEN GL test we get a result of 14365 with 100% 060 use and 14563 with DMA PLX use. So, we can say here that the DMA is replacing the 060 with good performances. The DMA is actually Single transfers (1 long at each transfer) and I have to finish the BURST mode (4 longs per transfer only in DMA read mode from SDRAM).

Now we can use DMA and continue to resolve the software problems...
DMA are necessary for USB PCI boards by example...

Like never before, Didier & Patrice need help from other developers...
They may have some specific work & investigation to distribute if you want to help !
The work to be done stays colossal and they cannot success alone (sure they will but how long time will it take ??).
Join us to debug CT+CTPCI.
Please contact Didier or Patrice M.

Some of you are developers & have not order CTPCI and I hope they will join us.

Thanks

```

The ATARI bookmarks page <http://eureka.atari.org/atari.html> was updated. The goal consists in valid links, even if it corresponds to sometimes dated information. Part of these bookmarks persist since the creation of the WEB site, back to the year 1996.

The interest with those numerous bookmarks, there's about 700, is to constitute an ATARI uptodate and dedicated search engine of the online scene. It is a service provided by Google Co-op. The base of this engine is a collection composed from time to time. It's now quite consistent.

This is a WEB 2.0 experience, because even if I'm responsible for its creation, the *ATARI Search Engine* can possibly be integrated by ATARI webmasters adding the HTML code

Hi,

Read on <http://www.edge-online.com/news/bushnell-rejoins-atari>

Bushnell rejoins Atari

Nolan Bushnell, the 1972 co-founder of Atari, has joined the new company=92s Board of Directors.

Bushnell has created over 20 companies since the original Atari and has been inducted into the Video Game Hall of Fame and the Consumer Electronics Association Hall of Fame.

Also joining Atari's Board is Tom Virden, a "seasoned executive in the online leisure, technology and travel businesses who will bring Atari his strong knowledge of online business and e-commerce."

Bushnell said: =93I am very excited to be reacquainted with Atari at a time when it is poised to make interesting strides in key growth areas of the games industry. The company and its iconic brands have always been important to me, and I look forward to further guiding them at the board level.=94

Other notable changes to the Atari Board include the departures of previous CEO David Gardner and Phil Harrison, who have both resigned from their Board roles.

Atari said that the two Board appointments come at a time "when Atari has increased its focus on its iconic brand and world-renowned game franchises while further expanding its business online."

ATARIstically yours =3D)

Subject: [ATARI NEWS] Nolan Bushnell

Hi,

Read on <http://www.edge-online.com/news/bushnell-rejoins-atari>

*Bushnell rejoins Atari*

Nolan Bushnell, the 1972 co-founder of Atari, has joined the new
company=92s Board of Directors.
```

Bushnell has created over 20 companies since the original Atari and has been inducted into the Video Game Hall of Fame and the Consumer Electronics Association Hall of Fame.

Also joining Atari's Board is Tom Virden, a "seasoned executive in the online leisure, technology and travel businesses who will bring Atari his strong knowledge of online business and e-commerce."

Bushnell said: =93I am very excited to be reacquainted with Atari at a time when it is poised to make interesting strides in key growth areas of the games industry. The company and its iconic brands have always been important to me, and I look forward to further guiding them at the board level.=94

Other notable changes to the Atari Board include the departures of previous CEO David Gardner and Phil Harrison, who have both resigned from their Board roles.

Atari said that the two Board appointments come at a time "when Atari has increased its focus on its iconic brand and world-renowned game franchises while further expanding its business online."

ATARIstically yours =3D)

Hi,

Do you know that France is a beautiful country ?
I'm sure Nolan Bushnell will really enjoy the trip.
I know California myself. It supports the comparison :-)
I watched recently "2012" on the PlayStation 3. The time
is not yet come to think about those big catastrophes.

This is in facts, a real good ATARI News, indeed !

Best regards,

Greetings,

I'm looking for someone in USA to test
a AlberTT graphics card for me.

You must have a atari MSTE or atari TT.
Or an atari that has a VME port

The card fits into the VME port.
It's not hard to install, nothing to solder.
But it would be best if you have some
experience with electronics and knowledge
about monitors. And know something about
graphics cards.

I'll supply the card, software, cable, and some
paper info. If you have the extra time to
test it.

I don't have the extra Computer with a
VME port to try it out.

If interested, e-mail me for more info.

Barry

Hello,

Did you see that someone wrote a driver for that card?
It seems that the original one was full of bugs.

The card is limited to 1024*768*16 colors.

http://yescrew.atari.org/eng/index_e.htm

I can do the tests for you, but I'm in France...

Guillaume.

But they aren't all like this I'm afraid. The OP might be lucky, in which case repair is simple (a CR2302 cell in a separate holder IIRC), or if the NVRAM chip is the more usual solid construction, then replacement is the only option. And it's best left to someone who has experience in this area.

No matter,

E-mail me your address and I'll mail you the card.
Try it out for awhile and see what you can do with it.

Greetings,

I was wondering if anyone has made anytype of adapters or cable hacks for a S Video Cable?

There are a few atari video related devices that can use a S Video Cable for input.

Any links, or info is appreciated.

Greetings,

Are there any CT2B users out there anywhere?

I was wondering if there have been any modifications,
software or info for better performance or bug fixes if
any have been found over the past 2years or so.

Also, of the Flashes, which version is the best to use?

And are there any known problems with any of the Flashes?

I'm a CT2B owner myself.

phantomm@suddenlink.net

Heh, well, I wanted to watch Tron, so that plan's solidified. ;) Maybe C&D next year. Good idea!

> I just wish I could be out in California for it. :-(

We'll take plenty of photos. (And you can see photos and vids from last year's.)

I have one. I use the latest flash (forget which one as it would be more than a couple of years old) it has the misfortune on my early CT2B of restricting it to 32meg. Its a trade off, latest flash or more ram and as 46 meg of ram appears to be enough for me, I'm not that worried.

I only have a stock Falcon setup atm tho, which remind's me I need to repair my screenblaster.

Mark

I didn't know that any of the Flashes had a effect of the size of FastRam!?

Like to know which one, and the side effect,  crashes?

Cable is smallest problem. Atari ST and followers have no S-Video output.
So, you need some modding in machine: http://ppera.07x.net/atari/stvid.php

Or get some RGB-S-Video converter . Basically, it is not too hard to make yourself one - with some PAL encoder chip...

ok, I've seen that page before.

I need a S video Cable with 2 RCA type plugs on one end for (luma and chroma).
They need to be male, but I have adapters if they are female.
If someone has one of these or can make me one, e-mail me.

Definitely 4. TOS 2.06, for STe, can be had in two chips.

Looking for one of those older Replay 4 carts for a ST.
If you have one for free, sale, trade. Get in touch
with me by e-mail.

Need one of these for a project.

Barry

A Video Cable is in the Works that Gives you S-Video Output for your ST! You can hookup your ST to a 32" Big Screen LCD Flat Panel TV for a Brilliant and Beautiful Picture! And I'm going to buy Two of them for my Mega ST's! I cant tell you who will be Selling it or Making it, but it's coming! Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

I'm so very sorry about the Trouble Jim! I thought I had a Problem! I use the ICD Driver and the Link 2 Host Adapter! I usually use my SeaGate 1.2 Gig Hard Drive but I'm setting up a new Hard Drive with 4.2 Gigs of Storage!I had problems with HD Driver, It was easier for me to use ICD Pro Driver Software instead! ICD's Software didnt seem to work with my Larger Capacity Drive, but I figured it out! I had to better interpret ICD's readouts! Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Its not the flash that effects the ram size, its the chipset. Because it
has an early chipset there are issues with its memory addressing. I
wouldn't be worried about it if I were you.

As for stability, I've struggled to keep the CT2 stable, its VERY fussy
about what it will and won't run. I'm not sure the reasoning behind that
but suspect its more mainboard related. I have a TT and another 14 meg
Falcon so I have plenty to experiment on ;-)

Aim is to have on one place all quality ST games in proper forms, with
checked content.
With screenshots, cover scans, videos, main data. If possible and has
sense, there will be exact images of original (STX if copy protected,
otherwise MSA, SST, ST), images of deprotected floppy versions and
hard disk runnable images.
Site is under construction currently, and it will take a lot of time
to fill it with thousands of games.
Of course, many depends of user feedback, contribution.

Anyone know what happened to the site? I was just on it a few days ago, I think, but it's apparently down for over a day now. Guess I'm curious if it's a temporary outage or a permanent closing of the site (and maybe me wishing I'd saved the page I was going there to look at).

thanks!

Well that's good and all... I'm sure it will be useful.

I am looking for a S Video Cable with 2 ends that have chroma and luma for
my Expose Digitiser.   If someone can make me one, or has one. I will
pay a reasonable price for it, or trade atari stuff if you want something
from
my atari collections. Also have PC games in original boxes with manuals.
Many haven't been used.

Also, does anyone know if a 8 pin mini din port (Y) adapter exists?
If so, e-mail me a link, address, etc where I can order.

I need to split a out put into 2 different inputs.

If not, I need a few of these made, should be able to make one out of
cables.

Barry of Data 8
phantomm@suddenlink.net

I consider my ideas, descriptions of projects, writings,
diagrams, pictures, graphics, video, music and
inventions as work.

ok, I have 2 CT2Bs, and one is more stable than the other.
Actually, it's almost as stable as a stock falcon. I can run just
about anything on it.

They other one is not as stable. However, the software setup is
different. I need to change the main bootup manager to XBOOT III,
which I have (original package) and do some sorting of Auto and ACCs.
Some need to be removed as I've found that some are just about the same
thing, just in another look. I'm suprised that it is as stable as it is, as
I
had that one loaded down with all kinds of ACCs, Auto programs and then
the stuff related to the desktop. However, I had the best software I could
get at that time. It needs the software streamlined and maybe a few
heatsinks
and a few wire connections checked.

But I have found the IDE upgrade on both to be rock solid and alot faster than stock. Also, the videomodification if done right, allows solid TC resolutions above 640x480. The software for that modification needs installed correctly too. I found that on one, it worked but wasn't setup correctly. And there are 2 or 3 versions and only one needs to be used.

Having programs installed that do the same thing but may have a few different features can cause problems on a CT2B imo. I've found that just about anything will work, but keeping it streamlined is part of the answer to a stable CT2B system. Also, the wire connections need to be secured. I've used a HotGlue Gun on some connections for stability and insulation.

I also have a almost stock Falcon setup and a couple of motherboards to tinker on.

You mentioned a different chipset. I know there was a Centurbo I or(A)version, that had the expansion ports.

If there were different chipsets on the B version, I'd like to know which ones, as I have 2, and there is a difference between the heatsink and Fan on the boards.

Also, anything about Dolmen you can tell me, or anyone?

For me the CT2B is just what I needed on my Falcon for extra speed over all. I think it was the right way to go, because compatibility is really good, at least on mine. But there are improvements that could be done.

The Blitter thing was/is annoying. I never fully understood why it had to be disabled, And it's one of the main causes for crashes.

However, when getting it all setup correctly, it's a real nice speedy way to fly. It's not the Fastest, but being able to use Apex and some other software with extra speed and memory is nice.

If anyone, knows of any modifications, software or hardware for better performance and stability of the Centurbo II version B, or earlier versions, then I'd be very interested to read or see them.

There are 4 TOS chips in a TT?
hmmm.... Interesting...

I've never had a TT before, about the only atari system
that I've not had at one time.
I'd like to have a nice one.

My mistake about the number of ROMs, I thought there were 2,
but I was just guessing as I've had no experience on that system,
I know about the MSTE which is similar in some ways.

I do wonder if this is a good idea to put all or most ST games up on the Net.

I'd like to read some discussion on it.
I'm not trying to keep atari owners from atari related software.
But once, it's all on there, what then?

Call me old if you want, but I'd like to see some good CD magazines with some games, articles, music and etc.

Sort of a ST Format, but all on a CD, and the CD doesn't have to be full.
Why not have some CD magazines, with a Web Site as a Base.
Atari owners can have a chance to add their creations, articles or whatever and have a CD every month or two.
The Net is fairly large, I think we need something to get us a little closer.

I only know of one ST related CD type magazine, The name escapes me at the moment. I think they put out about 4 CDs, I thought it was good.
One or two of the CDs were mixed mode and had a couple of Music tracks on the CD. I think the one I'm talking about came out of France.

Now maybe there have been other atari CD based mags. but I've not been made aware of em.

I grew up reading Compute! Magazine, and I treasure every issue I have.

All those debates about who had the better machine and etc.

The thought of having all the really good ST software online,
for anyone to download, to me is like handing the keys to your
house to thieves.

And with it all running on PCs, there will be no such thing as an Atari ST Group. Some of the younger crowd, don't fully understand. Those that grew up when it all started, and have kept on, know more.

One of the reasons ST software is so good, is that the code is tight. Programmers only had so much room to work with and I know it wasn't easy to code some of that stuff.

What about other platforms like Amiga, and the older Apple software. What's the situation with the software for those systems?

Have they put all there good stuff online for download?

Right, almost everything is online. Let say some 98% of SW. However, it is not easy, especially for beginner, inexperienced people to find certain game. Because there is a pretty mess with menu disks, with diverse floppy images which are just copied, patched with some unnecessary (or even harmful) bootsectors etc. Tosec is considered as most complete archive, but it is full with corrupted files, repeated images etc. In fact, best is gamebase ST, but it is not for Online. My goal is not to have everything, but to have good stuff, checked, and in proper for for users - so may run games on real machines with floppies, hard disks or via emulators. Then to have some useful infos about games - pictures, videos, limitations listed etc.

ST code is sometimes compact, sometimes not really.

I'm sure that WEB is full with Amiga, old Apple stuff too. But I'm experienced only with Atari ST. And we are now at other important point - to do game Archive properly you need to be expert about certain platform - so can judge what is good floppy image etc. As I see, people maintaning archives is usually far from beeing expert.

I must agree, What would happen to the 1000's of small Atari ST only
Stores ?
They would suffer sales and go broke!

Sears and other large chains would Stop selling Atari Software!! OMG!!

Sales in the millions would goto Lowest levels since 02/22/2010!!

Goto one the local stores in your area and buy games there!! look in
the yellow pages!!

Jk

Yea very funny.

I see it like this,

Put it all on there, then.
Everything new or old.
Soon as it hits the store shelf, no matter put it up on
the net for free. And your mothers ugly Face too.

I e-mailed you twice, both times it comes back as undeliverable.

I'd like to order an adapter, e-mail me.
phantomm@suddenlink.net

I can make one, just have to put off working on a project for a little while.

Well, its not *direct* support, but I use a script with BBS Express! ST to work with my CD-Roms. Works pretty good - users can browse the CD's, tag files, and download them from the BBS proper. At one time, I had 2 of the Pioneer 6-pack CD-Roms up and running with it, using Anodyne Softwares ExtenDos software. I actually had 10 CDRoms available online. We're slimmed down now, but we still have 2 CD's online. :)

Hi,

If you're looking at the financial part of the game, here for instance

<http://www.google.com/finance?q=3DEPA%3AATA>

"Nolan K. Bushnell, Director, Representative of BlueBay High Yield Investment, Co-founder of Atari Inc." we can think that apart from his management skills, Nolan Bushnell brings with him investments.

If you're also looking at the fame part of the game, here for instance

<http://www.gamespot.com/news/6192274.html>

"Atari movie to star DiCaprio. Paramount Pictures has given the nod to making a movie about the life and times of Nolan Bushnell, the outspoken founder of the company." apart from being the creator of the firm, Nolan Bushnell inspires history with a charismatic personality, undoubtedly.

For the time beings, if you examine the value for the auction, the financial part for ATARI is the immediate, and most observable effect.

Nolan Bushnell really looks to be very welcome back to the company :-)

ATARIstically yours =3D)

> Probably cheese.

I'm sure Nolan Bushnell will appreciate the French one. We also
have frog legs, bourguignon snails, baguette of bread, and b=E9rets.

Sorry Lonny, but you may never have done the trip from Pandora, do you ?
You wouldn't be so rude. I'm wondering if it relates to French usages
or to the famous disgusting "Chuck E. Cheese" fast fooding ?

Were always close to xenophobia, if you don't care with your language.

I can imagine younger generations don't know about Nolan Bushnell.
I don't know much myself. So please, tell me, who's that great man ?

ATARIstically yours =3D)

Hey!!! Lot's of little kids can *not* tell the difference! Note
that many kids can even stomach eating at McDonalds...  :-)

Hello,

I upload a multi-layer resource for ResourceMaster 3.65

It contains a german, englich and french version. The french version is not
complet translated. If someone will do this, please ask me.

Thanks, to Peter A. West for his help with the english version.

Gerhard

Ho, sorry. Nolan Bushnell is living in California. I mean, if you love
French Fries, then come and eat those in France. It's always better :-)

Best regards,

Not that this conversation has ANYTHING to do with Atari, but I personally don't like McDonald's fries. Burger King's and Jack-in-the-Box's are much better, in my opinion. In-n-Out's are also good for that "home-made" french fry taste. Wendy's are ok, too. I simply cannot eat McD's after they've cooled for a minute or two (the time it takes to get them from the deep frier to the table). Very nasty. BK's and JitB's keep a good flavor and crispness, even when cool. Again, my opinion. Now, I digress. That was fun, but now back to Atari stuff... :)

Mike Freeman

Hello all. If anyone does not now, the Firebee is coming along nicely. From the last bit of news, it looks like it is almost ready to ship. Should be one hell of an Atari clone. Anyone here on the list to receive besides me?

     Sounds great!
     The important for me was to get boths things:
     - a faster machine with newer technologies (Ethernet, memory cards, USB)
     - the old ports (rom, DMA) to keep running my old stuff.

     Guillaume.

Really, really wanted to - but couldn't affort it at this time, to be
totally honest... :(

Newsgroups: comp.sys.atari.st
Subject: wanted NVDI 4

I want and need a copy of NVDI 4. The reason is that NVDI 5 or 5.03 does not play nice with x-windows, or at least I have not found how to make it cooperate.

Jim

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	342	AMD64
aranym-0.9.9.linux.ix86.rpm	534	ix86
aranym_0.9.9.linux.amd64.deb	88	AMD64
aranym_0.9.9.linux.i386.deb	213	i386
aranym-0.9.9-cygwin.zip	1557	i386
aranym-0.9.9-macosx.dmg	810	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	280	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (1177), Windows (1557), Macintosh (810) =3D total 3824.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is
a minimal distribution of <http://aranym.org/> designed for GNU / Linux,
Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

Yes, the process of building the first series has begun, it will take some
months to complete.
But there is still a huge amount of work to do on the software.

Hello,

I tried to send a post to Steffen E. (the author of Gemar), but
unfortunately it bounced.
Anyone could tell me where I can contact him now ?

Thanks in advance,

J.-Luc

Likewise.  My Atari use is now at hobby status -- I'd love a faster
Atari, but also need a new MacBook.  :-(

> Very nice!

I'm really fond of animations. Since I discovered computers in 1981
(with a Sinclair, and since 1986 with ATARIs) I experimented a lot
with 3D technologies to render drawings with relief and depth.

The next 22th of May 2010 exactly, Mr. PacMan will be thirty. I wish
him a Happy Birthday, specially because playing arcades, he inspired
me a lot. I've described my proper vision of the character with ...

- Icon <http://eureka.atari.org/pacman.gif>
- Comics <http://eureka.atari.org/pacaway.gif>
- In three dimensions <http://eureka.atari.org/pacman.mov>
- Animation <http://eureka.atari.org/walking.mov> with sound.
- In real life <http://eureka.atari.org/pacman.jpg>

I initially drawn him in 1984, when I was at school for baccalaureate.
The character was modelled with Cyber Studio (from Tom Hudson), and
converted from 3D2 to Persistence of Vision with 3D2TOPOV, adapted
for animation in the POV-Ray language <http://www.povray.org/>

I'll have to draw him Mrs. PacMan, but ghosts around him are existing.
You've noticed that I'll celebrate my 30 years computing, next year :-)

I wish you all such a great success, because Patrick Jean is a *master*
We will soon have to hear about Mr. PacMan birthday. So, stay tuned !

ATARIstically yours =3D)

Sorry it took so long to replty, been busy. Yes it does sound
great. Need to get a new tower and a PCI backplane to get
things working. I will probably build this before I start
on the upgraded Falcon system.

Yes, there needs to be software and most important, drivers.
It will have 4 USB ports and I would to be able to use things
like a USB printer. Too bad Frank Nauman passed away. He would
have been an asset in this regard.

Yeah it is a little expensive (about $800), but I need something
faster then my 16meg Falcon and this machine will fill my needs
for years to come.

Basically, if an open-source driver exists for some operating system (ex:
Linux), there are chances that the device could work on Atari machines one
day. In the opposite case, it is will probably never be possible.
I don't know in which category fall USB printers.

Hi,

I played PacMan for its 30th anniversary on <http://www.google.com/>
Google is my friend :-) Happy birthday Mr. PacMan, it's brilliant !
You just have to press "Insert coin" and eat pills avoiding ghosts.
Ho, this game is HTML5 compliant. I played it with Safari, on my PMG4.

PACMANistically yours =3D)

It would be nice if the B&B brothers would do an update to NVDI and add
the USB port as an option.

Ther Atari Coldfire (Firebee) is now in production. You can order one
from the Medusa Systems website. I was one of the first 25 to order
one so I should get mine soon. Others will be able to get theirs in the
second half of 2010. In the beginning, I never thought it would become
a reality, but now it has.

Google promises Pac-Man forever
Pac-Man 30th anniversary doodle to become permanent
Ian Paul PCWorld.com

Due to overwhelming popularity, Google has announced that its interactive 30th anniversary Pac-Man doodle has earned a permanent spot on Google.com. From now on, whenever you need a Pac-Man fix just point your browser to Google.com/pacman and you can enjoy the search giant's version of this iconic video game any time you like.

While you've been able to find online versions of Pac-Man for years, Google users were thrilled to find a working version of the video game designed as Google's logo on Friday.

Google Pac-Man gameGoogle posted the homepage doodle in celebration of Pac-Man's 30th anniversary, and the game was only supposed to remain available for 48 hours. But enthusiastic user feedback to "Pac-Google" inspired the search giant to rethink its plans.

Numerous sites popped up offering free downloads of Google's Pac-Man for those who wanted to keep their own copy once Google took the game offline.

Twitter users cracked jokes about how Google had killed US productivity on Friday by putting the game (including all 256 levels) across the screens of millions of office workers. There were even suggestions that Google's JavaScript-based Pac-Man was a subtle jab at Apple CEO Steve Jobs.

When Namco and Midway games introduced Pac-Man to North America in 1980 it quickly became a fixture in American popular culture. Pac-Man inspired numerous video game spin-offs, board games, lunch boxes, a Saturday morning cartoon and several versions for home video game systems.

Despite the overwhelming user reaction to Google's 30th anniversary doodle, I have no doubt Pac-Man fever will start receding over the next few days. But never fear, once this version of Pac-Man is forgotten, I have no doubt it will live on as fodder for those always popular articles detailing Google's best Easter Eggs of all time.

Don't confuse CT2 A & CT2 B please...

Your CT2 is A, not B.

A = 32 MB max with early chip (from National Semiconductors).
B = 128 MB max with my designed chip (CPLD)

The letter is on the PCB after CT2...

Regards

Mines a CT2B Rudolph, with early flash it pulls up the full 64MB chip,
later flash only 32mB is available. Still a good card tho. ;-)

CTPCI boards are ready at the factory
I will get them monday.

I have to test some boards and the shipping will begin just after for developers and others after, in the order I get the payments.

Not normal thing because ALL CT2 B have the same code and ship !
And the EDO ship is decoding and managing 128 MB.

What do you mean by 'flash' ? the software inside flash ship or CPLD ???

Hello,

The first version of a new Internet client is available at the following address:
http://users.skynet.be/jflemaire/files/gemdict-0.1.zip

GEMDict is a program for the DICT protocol, which allows querying online dictionaries and retrieving definitions.

Requirements:
- MiNTnet;
- AES version 4.1 (only tested with XaAES for the moment);
- NVDI.

Limitations:
- Non-ASCII characters only possible with the system font, with the ensuing limitations;
- incomplete documentation;
- "match" mode barely useful.

Advantages:
- It's a first!

Installation:
- None to speak of, apart from the files "gemdict.hyp" and "gemdict.ref" that must go into the GUIDES folder.

Thanks to the HighWire developers for the Unicode-related code and to Jean-Luc Ceccoli for the tests.

JFL

Sorry for the delay Rudolphe, I haven't used it a lot lately as the battery has given up in the dallas. Will have to sort it out as I'm rearranging my den ;-)

With a 64mb EDO installed it registers as 32mb with the most current version of the bios (software inside the flash) yet with older versions it pulls up the full 64mb. I will get it up and running again in the next week and let you know how I go.

Cheers

Mark

Use this HotLink and make a list for your Atari Want List and I'll contact
you! Sometimes something on your list may not be in my Atari Catalogs!
Make a list of HardWare/Accessories, Games/SoftWare, Books and References
for the Classic Atari 8 Bit and the Atari ST Computer Lines!

Not everything Atari you want are in my Catalogs! Many I havent added!
Do yourself a favor, E-Mail your WantList of Atari to Atari@aracnet.com
Be specific! Make the Subject: "ATARI WANTLIST" or use the WebLink below!

http://www.aracnet.com/~atari/maillist.htm   ATARI SURVEYS AND WANT LISTS!

I cant read your mind, so fill out the survey so I can get to know you. It
helps me figure out your Atari needs and Interests. Feel free to fill out
the Atari Survey on my Contact Page! Goto my Link above. Thank You.

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or
Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Two, "A" and "B". The Original ST had no drives and used an external drive with a through socket. The Drive Select line is rotated to the next pin as the signals flow through the drive. This allows two drives to be cascaded..

I have a feeling there was a hack some where for a third drive. Not sure if
it used the printer port to get the extra drive select or decoded used a 2-4
line decoder to expand the existing ones...

Hey Dave. Yep, I think there was at one time. Somewhere in one of the UK
magazines maybe, or some place like that.

Hi,

Here is statistics about ARAnyM 0.9.9 downloads, released 2009/09/09

Package	#	Architecture
aranym-0.9.9.linux.x86_64.rpm	242	AMD64
aranym-0.9.9.linux.ix86.rpm	452	ix86
aranym_0.9.9.linux.amd64.deb	78	AMD64
aranym_0.9.9.linux.i386.deb	175	i386
aranym-0.9.9-cygwin.zip	1242	i386
aranym-0.9.9-macosx.dmg	666	Mac Universal (PPC/x86)
aranym-0.9.9.tar.gz	221	Platform-Independent

Download at <http://sf.net/projects/aranym/files/aranym/0.9.9/>

i.e. Linux (947), Windows (1242), Macintosh (666) =3D total 3076.

There's also *miniPack* <http://eureka.atari.org/miniPack.zip> which is a minimal distribution of <http://aranym.org/> designed for GNU / Linux, Macintosh and PlayStation 3, running "out of the box".

Enjoy, it's yours =3D)

So, you should use the previos version of the flash to have 64 MB.
AFAIR, the lastest version was release after I leaved the company... and it is possible it is buggy !
Give me the date of the version I will tell you if it is good or not.

Cheers Rudolph, jut plugged the old girl in. I'd forgotten how fast and how much fun it is ;-)

According to putflash, the current version is 1.39. I can't recall the earlier version that allowed for 64mb. Do you happen to have an archive? I could sit down and figure it out that way. I do seem to recall it was quite an old version tho.

Thanks again.

Mark

Got an answer for you. 1.32 or earlier pulls up as 64 meg, 1.33 or later
pulls up as 32 meg. Now to replace that pesky clock chip.....

Thanks Rudolph

Mark

Yes, 1.32 is the good one.

There is an archive on my pages for CT2.

Cheers Rudolphe. Been so long since I've used this thing I will have to
relearn its quirks. Got it sitting next to my TT030 atm, ;-)

1.32 it is.

Thanks again

Mark

It was stressful, I forgot my 2600 & 7800 cartridges,
I wore a hole in one of my socks, and I'm sore all over.
...but overall, this year's Atari Party was GREAT!

Check out the photos:

  http://www.newbreedsoftware.com/atariparty/2010/photos/

As people give me permission to, I'll be adding more photos,
so if you're really curious about it, check back again in
a week or so.

Enjoy!

LS

There is a new version available on my home page (see sig)

Changes:

Compiler:

```
    Option -7 preliminary Coldfire V4e target.
    =========================================
    See also: Status of Coldfire support.

    Fixed Option -c- No nested comments didnt work.
    Fix in option -*i (32 bit int)
    error 'no declarer for extern object'
       changed to warning, default is 'int'.

    New warning: 'no prototype for 'name'.
    warning: 'no args matching' only if there are args to match
             and only for old style prototypes.

    Removed option -4 (double is float)
```

Removed option -*s (scale 32)
It appeared that Pure C does long scaling the same way
without being optional.

A few small fixes for very rare situations.

Removed a spurious call to a diagnostic print routine.
Reduces all binaries by about 7Kb.

Relaxed a limitation on the number of names in the Pure C
object output format.

Linker:
Improved load map.
All symbols are printed.
Local symbols are enclosed by < >.

Option -n: Write a 'nm' style list of symbels to prog.SYM

DRI symbol table in executable:
write symbols first 22 characters in stead of first 8.

Assembler:
Allow size .b in Scc instructions.
Detection of '*' comment in lexer.

new directives: (from devpac)
incbin
include a binary file as is at the current position.

section
allowed operands: text, data or bss.

Library:
Merged ainclude and sinclude folders.
ainclude is now obsolete and removed.
The sinclude folder can be used for both Pure C libraries
and AHCC libraries.

All 16 bit integrals in sinclude are declared as short !!!!

FILE structure of AHCCSTD.LIB compatible with the one
of Pure C lib. (Needed for fixing AHCCSTD ;-)

Fixes in AHCCSTD.LIB

Changed name of folder from AHCCLIB to AHCCSTD

Update wind_get. (table of number of replies)

Have fun.

```

Sounds a little confusing in a natural language context :-)

typedef struct { ..... } FILE;

is what I was talking about.

Friends!

I'm proud to announce the 2010 edition of the Nordic Atari Show (NAS)! The event takes place June 11-13 in Falk=F6ping, Sweden (about an hour from Gothenburg by train).

NAS is an annual get-together organized by the Swedish Atari Club (SAK). It's a simple, improvised event; the idea is to hang out, eat pizza, and fool around with our beloved Atari machines. The essence of NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are welcome as well. However, if you're 14 years old and wish to play Counter Strike with your friends, please go somewhere else

For more information, take a trip to: http://www.sak.nu/index.php?ucat=3D15=
&sta
... index=3Dtrue

I want and need a copy of NVDI 4. The reason is that NVDI 5 or 5.03 does not play nice with x-windows, or at least I have not found how to make it cooperate.

Jim

Perhaps I should attend this year? I haven't been there since 1998.

What is the problem? I ran x.app on my Falcon together with NVDI 5 for
years.

Maybe provisions for Papyrus, and Speedo Bitstream vector fonts.

It sets a FIF path in NVDI.INF, but does not write a FIF file there.

I do own a FIF file, which is not recognized as such, but I do not know which version wrote it, and one that does not default to BTFONTS might write a proper FIF file. What I have is two disks of NVDI 5.01, and the upgrade disk to 5.03, and what may have been the very last CD of 5.03.

I also have a printed-out fonts.db, which is not what x-windows writes now, since NVDI finds only system fonts now.

In other words, I really do not know what is wrong, and need to try something else.

Jim

I finally got what I wanted on my TT030 SCSI bus. It should not be
difficult, but I used a bus extender from Granite Digital, with input
connector terminated and output connector not terminated (which seems to
be important) and now have one CD/DVD box, one tape backup box, one ZIP
drive, and one Epson 1200S scanner.

As a matter of note, I once had a fuller SCSI bus, and do not have a clue
as to why I can't get my other ZIP mech recognized.

This is when I discovered that LOOK2_UK.PRG was munged, and its LHZ source
was too. I have spent several hours looking for another copy, without
finding it, both in my disk connection and using the wwwait.

It is the only driver for this scanner on this platform.

Does anyone have a copy they could send me?

Jim

I'm afraid I don't understand the problem. What doesn't work? Papyrus?
X? I used a plain xserver-install and a plain NVDI5-install (5.03)
without problems.

You should! Like the invite says, it's a losely organised event, focusing on hanging out and working on our projects. My personal experience is that actually talking to other coders IRL gives me lots of new angles in my projects, feeding the flame so to speak.

You're extremely welcome if you decide to show up! I don't know exactly where you're located, but how about a joint venture for you + Odd Skancke?

Thanks for the answer, Derryck. Your website is one of the places I looked, and no, that is not for the kind of scanner I have.

I did page through printed out indexes to archive sites, and even typed the file name into two search engines, before asking for help. When the file name cannot be found, except in magazine articles about it, the file is pretty scarce.

: I'm afraid I don't understand the problem. What doesn't work? Papyrus?
: X? I used a plain xserver-install and a plain NVDI5-install (5.03)
: without problems.

Obviously, I have some mysterious problem. X-windows, under exactly the
same circumstances, does not find the fonts it used to find.

Papyrus is not currently installed. I do not need a document processor,
with a very good typing program and Calamus.

What worked for you does not currently work for me, and I am looking for
something else to try. The something else I am looking for in NVDI 4.

I did look at my mailbox, and thank you very much. Downloaded, and used, for a particular project. I own a Minox B camera, and if you set it for 18 inches (english unit model), hold it at arms length, look into the lens, and one gets a distorted view of oneself. Now I have that in TIF format.

Concerning NVDI, the problem might be my machine, although the only thing that seems to be wrong is that the DMA chip is dead, so laser printer does not work. I have no idea what NVDI does with a DMA chip, but what does not work now worked at one time, and everything else about this machine seems to work.

Thanks again. Scanner is a scanner again.

Then the circumstances must have changed ;-) You mean that it doesn't
find the VDI fonts, right?

Have you tried the following?

1. Delete the files /etc/X11/fonts.alias and /var/lib/Xapp/fonts.db.
2. Make sure that X.app has write access the the folders mentioned
above.

> What worked for you does not currently work for me, and I am looking for

I doubt that downgrading to NVDI4 will help, but it might be worth a
try. Unfortunately I don't know where to find it.

: --

I have some parts on order to check out a suspicion. The ASCI port does not seem to work, the floppy port produces only an occasional note that the disk is defective, and both those things use the same DMA chip, and the port uses three DIP chips. If, and only if, NVDI burps because it cannot verify that a laser printer exists, this might (or might not) solve my problem.

I have swapped laser printers, since I have two in working condition, and that changed nothing.

I will of course try what you suggested, and report on the results of that.

Jim

Mikro,
  Apparently I had a corrupt file when transferring from my PC to my
Falcon060.  So I have to test my 3.5 inch floppy to find out which is
defective.  I ended up downloading all HIGHWIRE, Zweather and
MagicXNet files I needed and burnt them to a CD and all was well.
Zweather works once again!!!!  It is great to have this little piece
of wonderful software working once again!!!

Thanks,
Falcon060

Wouldn't it be possible to cache the converted icons instead of converting them each time the application is started?

Jo Evan,

I wondered the same thing. But, if your running a CT60 at 90+ mhz. I doubt it takes very long. Once I am at my desktop, it is less than 5 seconds and Zweather is up and running. But I could see where slower atari computers would be an issue. By the way, how are you doing? Not sure if you remember me? I was the one that gave you all the MagicXNet files I believe to look at and see if we could figure something out for the EtherNAT.

Talk to you later,

```
Falcon060

Ah, glad to see you have sorted it out. It's true I haven't tested it
on MagiC but it would be very strange if it didn't work.

About the loading time: in Zorro's latest sources you can find very
similar thing -- all images are bundled in one PNG and stored as MFDB
(Atari native) format internally. But hard to say anything about
release date, it's up to him or anyone else who is going to continue
the development (https://sourceforge.net/projects/z-tools)

MiKRO,

Maybe sometime this year I will take a look at the sources and try doing some compiling of my own. Then figure out the PNG loading process and see if there is a better way or not. But honestly, it only takes less than 5 seconds from the time the desktop appears till Zweather is up and running. Not sure that it has any benefit other than for much slower computers with not much ram. Even a Falcon030 stock with 14 mb of Ram should do ok at loading this in at bootup time. Anyone have any thoughts on this? Does anyone actually run Zweather on a stock Atari computer. If so, what are your OS, system

specs and how long does it take to bring Zweather up and running?
Would really tell me if its worth the time to take on a project like
this.

I do, and startup is no longer impressive. From a running desktop, kill
Zweather, and start it up again, and it has found its data and finally
pops up in a blistering 32 seconds. This is on a standard TT030, mono
monitor.

I friend of mine, has a 1040STe and asked me about any
commercial quality programs that teach basic guitar cords
and maybe some advanced stuff, that will run on his STe.

Seems I remember one named guitarist or something like that.

Anyone had any experience with any software like that for
STe?

Any good stuff to recommend, that he may be able to
buy new or second hand?

ok Bravo, tell me what you have in stock now along these lines too....

This guy will order.

Darn. Have copy, packed away. planning to move. Guitaristics, think I got
it from It's All Relative. Google might help.

Jim,
  I see from your signature that you are from Sylvania, OHIO.  I live
in a small town in Northwest OHIO called Montpelier!!! Maybe sometime
we should get together. My e-mail address is
falcon060(at)roadrunner(dot)com.  Get a hold of me sometime!

Anyone using or used a MidiMate Plus before?
I'd like to know if it worked well for what you used it for
and what equipment you used with it.

Is there a group or mailing list for those who use Atari based
Computers for Music related stuff?

In comp.sys.atari.8bit Bill Kendrick <bill@newbreedsoftware.com> wrote:
> FYI - Plans for Atari Party 2010 move ahead!

The date is officially set:

Sunday, March 14th
12pm-8pm

At:

Redwood Park Community Bldg
1001 Anderson Road
Davis, CA 95616

See: http://www.newbreedsoftware.com/atariparty/2010/attend/ for details, maps, directions and public transit options.

> (1) We'll be screening a movie (if not two!).
>   So far, the documentary "Once Upon Atari".
>
>   http://www.newbreedsoftware.com/atariparty/2010/movies/

We'll also be screening Disney's "Tron!"

> (2) We'll be having a raffle, with some prizes donated to the event
>   by corporate sponsors:
>   * O'Reilly Media (gaming & retrogaming books)
>   * ThinkGeek ($100 gift certificates)
>   * Legacy Engineering (some USB Atari CX-40-style joysticks)

Now listed here:
http://www.newbreedsoftware.com/atariparty/2010/raffle/

The raffle now also includes three Atari computer systems
(Atari 800 + 1050, an Atari 400 + 810 and an Atari 400).
